

Building the next generation touch-less travel experience

The trains and train stations of the future are more than just a journey

It is an experience that can put a smile on your face as you easily walk through a high-speed biometrics identification, remembering the old days when you'd have to reach in your wallet or wait as a whole family goes through the turnstiles ahead of you

How can we create a safer, cleaner, more efficient and a delightful journey for the travellers that is fully digitized?

Experience Pillars

Intuitive

Simple to use across the journey
Short learning curve
Saves effort and time

Intelligent

Connected transit & travel
Timely & relevant notification
Smart assistance at every stage

Credible

Trustworthy
Secure
Dependable

Interactive

Accessible across the journey
Quick one-click transactions
Engagement at strategic points

Understanding Users

Age Bracket

Millennials
Gen Z
Gen X
Kids with guardians

Frequency of Visit:

Every day (Office Goer & Resident)
Only on weekends (Leisure Traveler)
Once a week (Business Traveler & Resident)
Once a year (Tourist)

Group Size

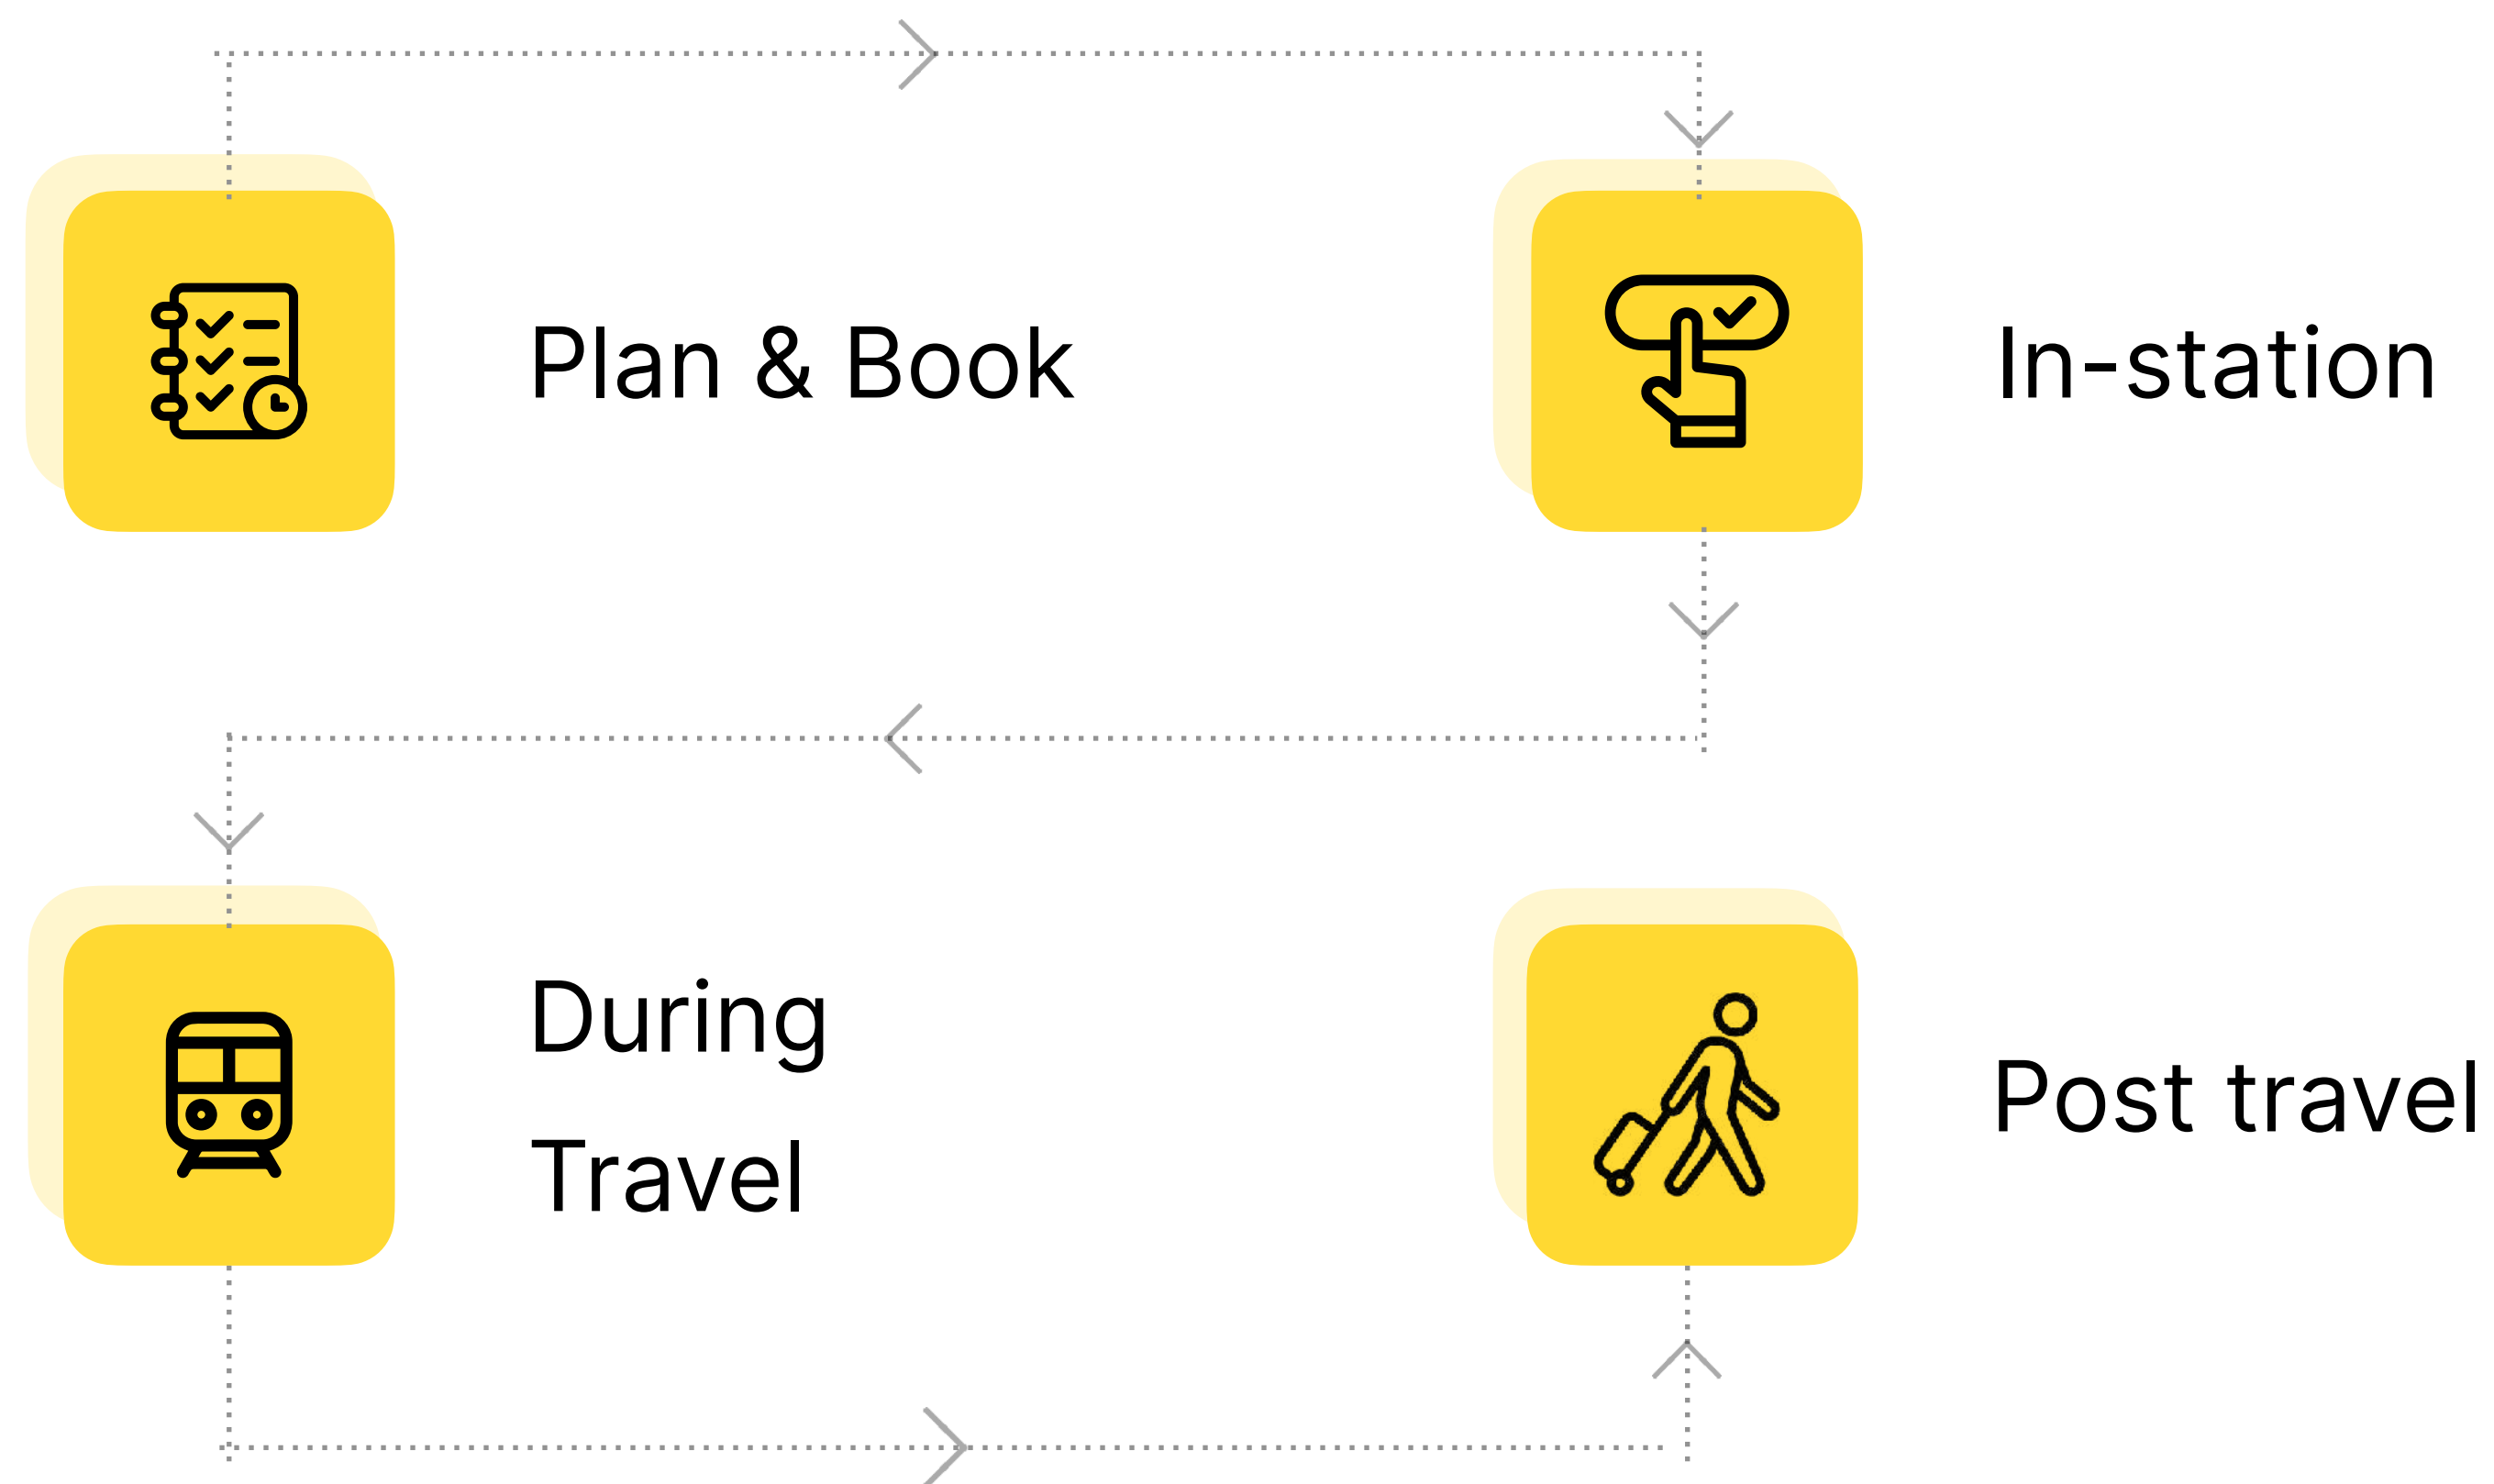

Single
Couple
Group of 3 – 6
Large 16+

Types of Traveler:

Leisure Traveler
Business Traveler
Tourist
Resident

Plan & Book

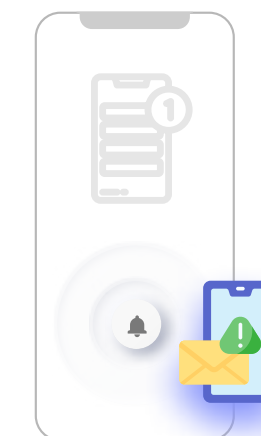

Quick bookings
prior to travel

Smart Parking-
Get the directions on
phone and park!

Check availability &
train schedule,
route maps

Realtime personalised
notifications

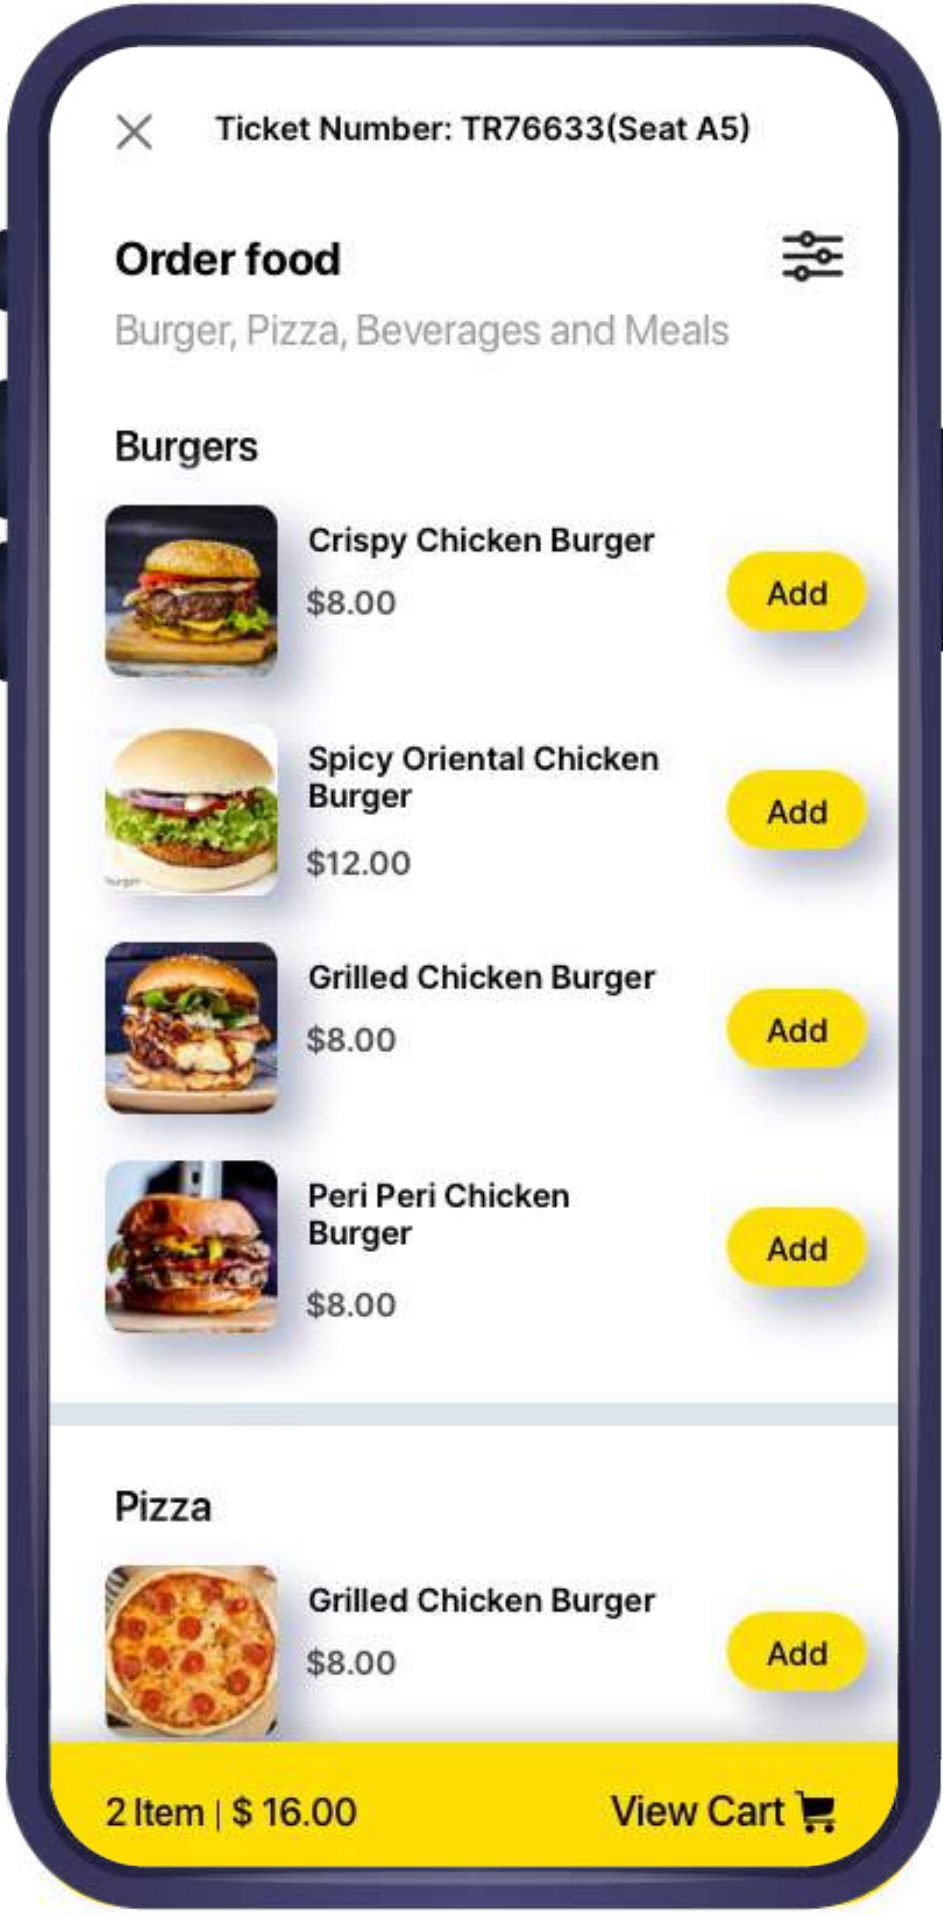

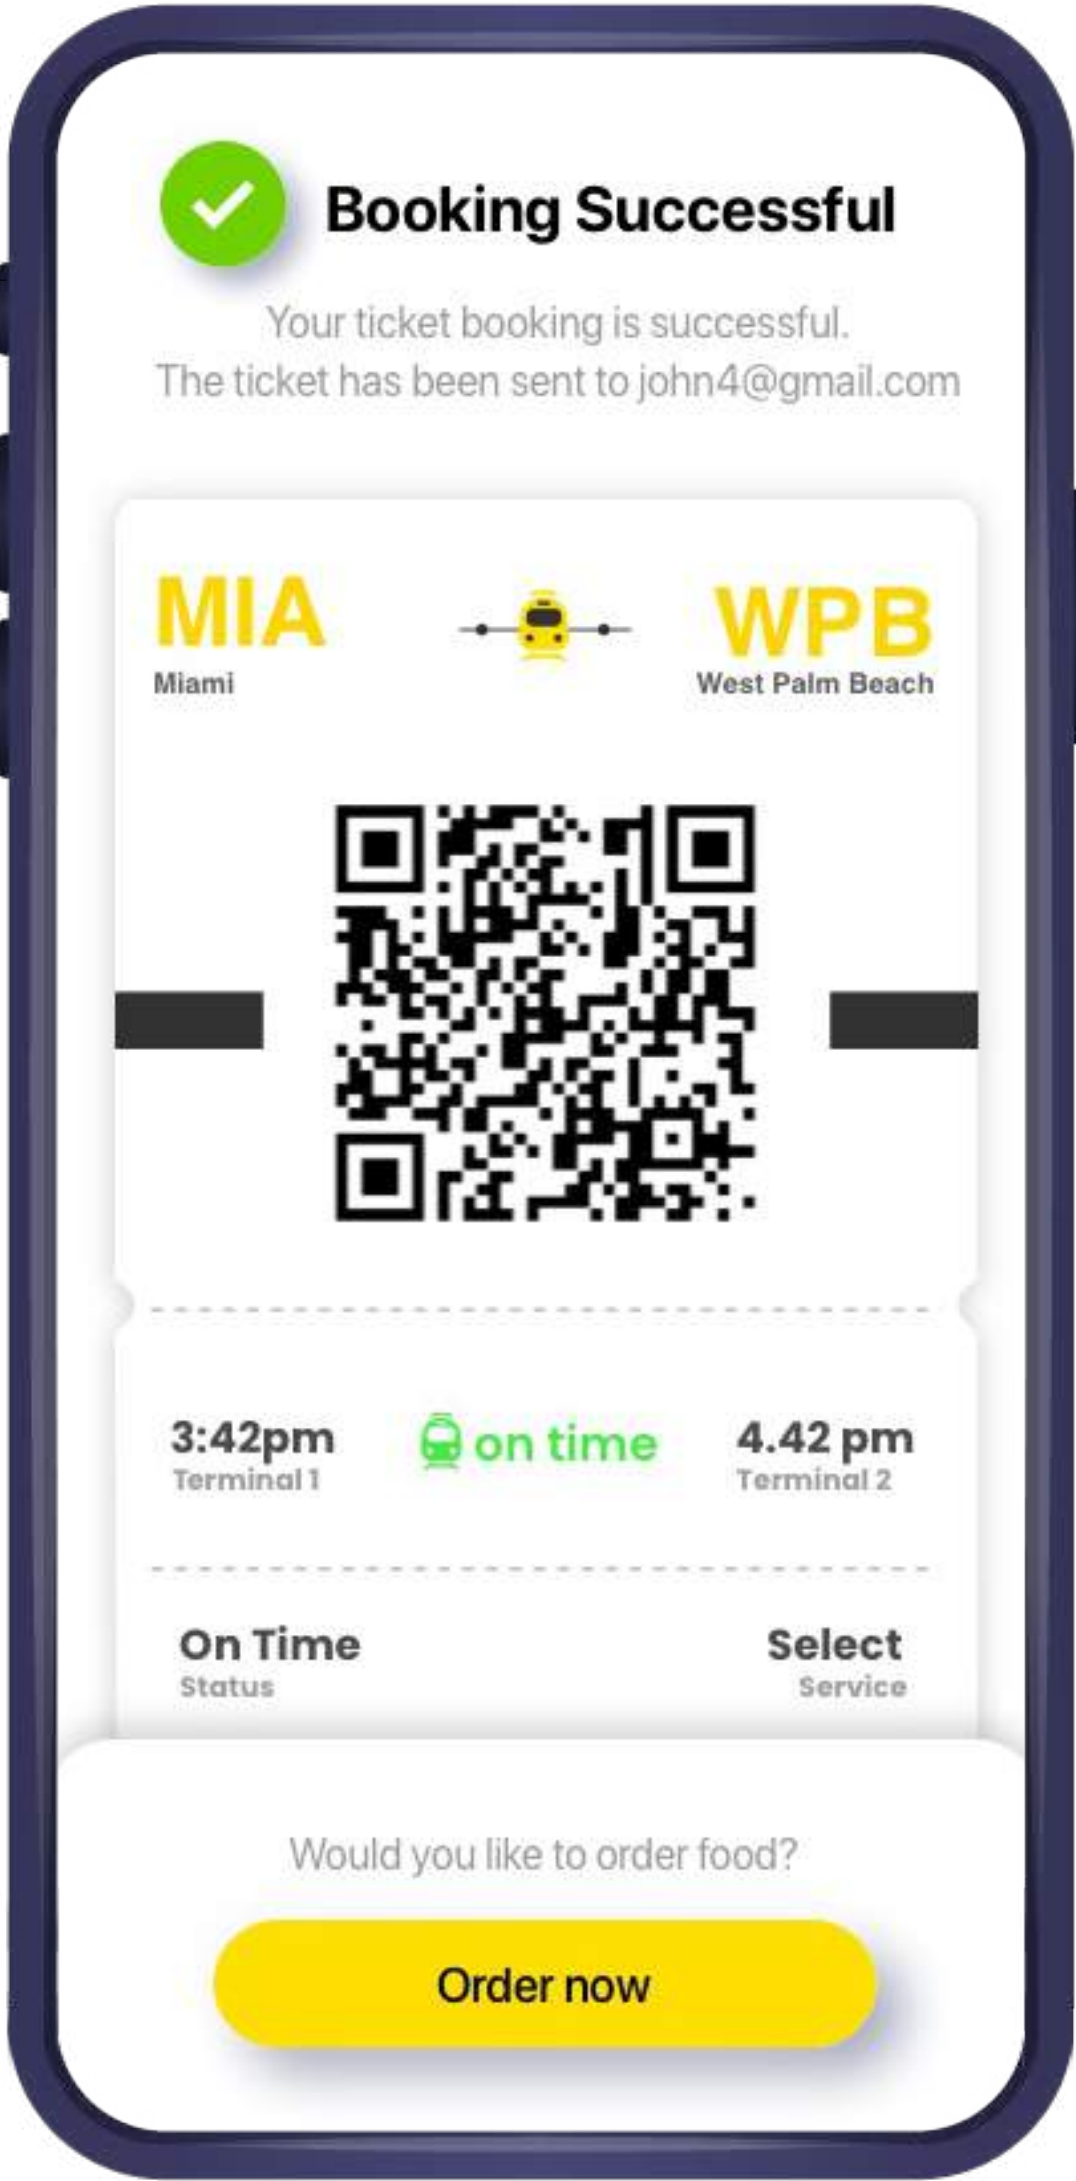

Quick Bookings Prior to Travel

A quick booking process, accompanied with options like choosing from a **curated menu** and opting for an **on-seat serving** at a designated time

Timely notifications

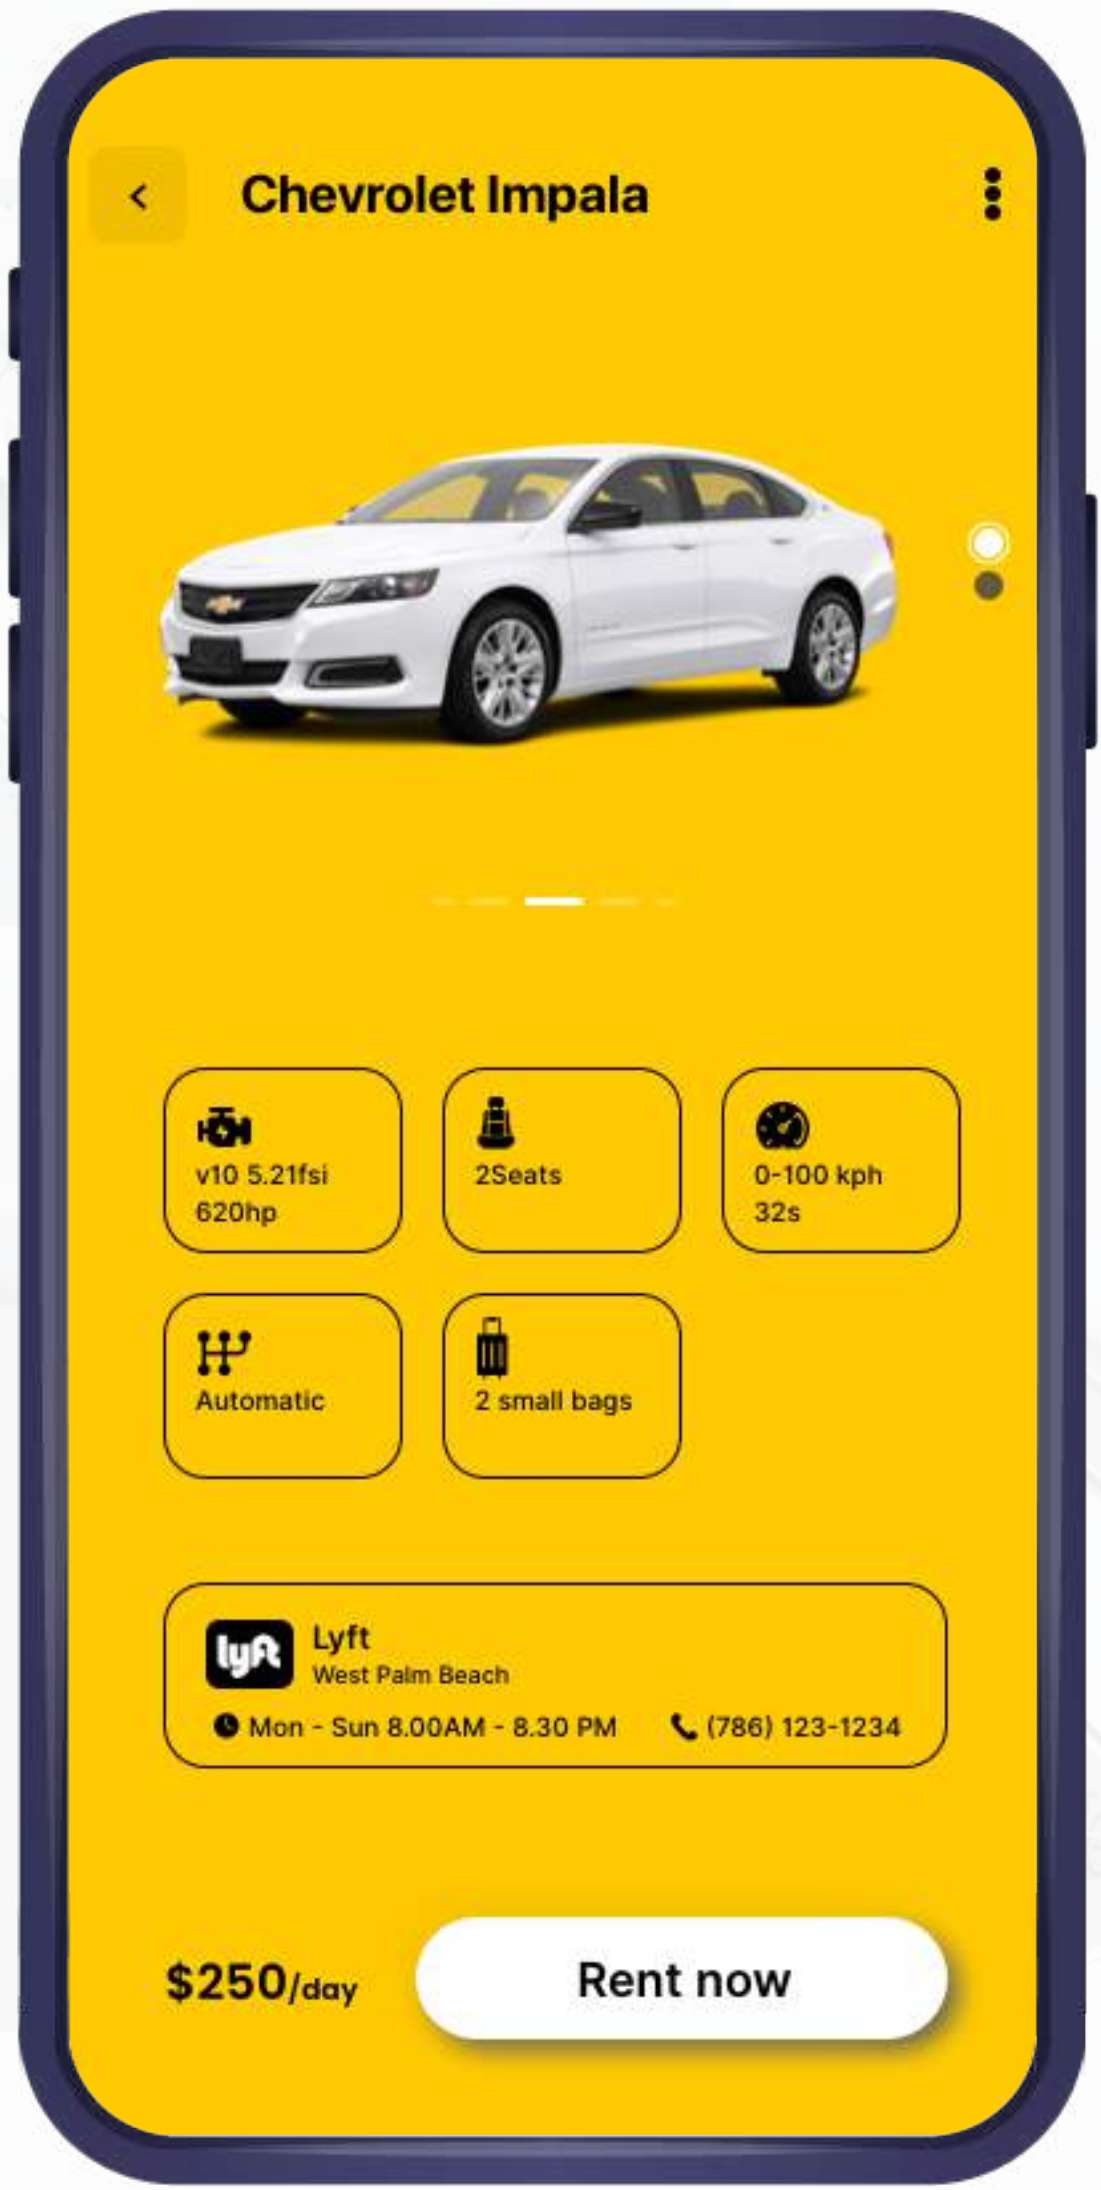

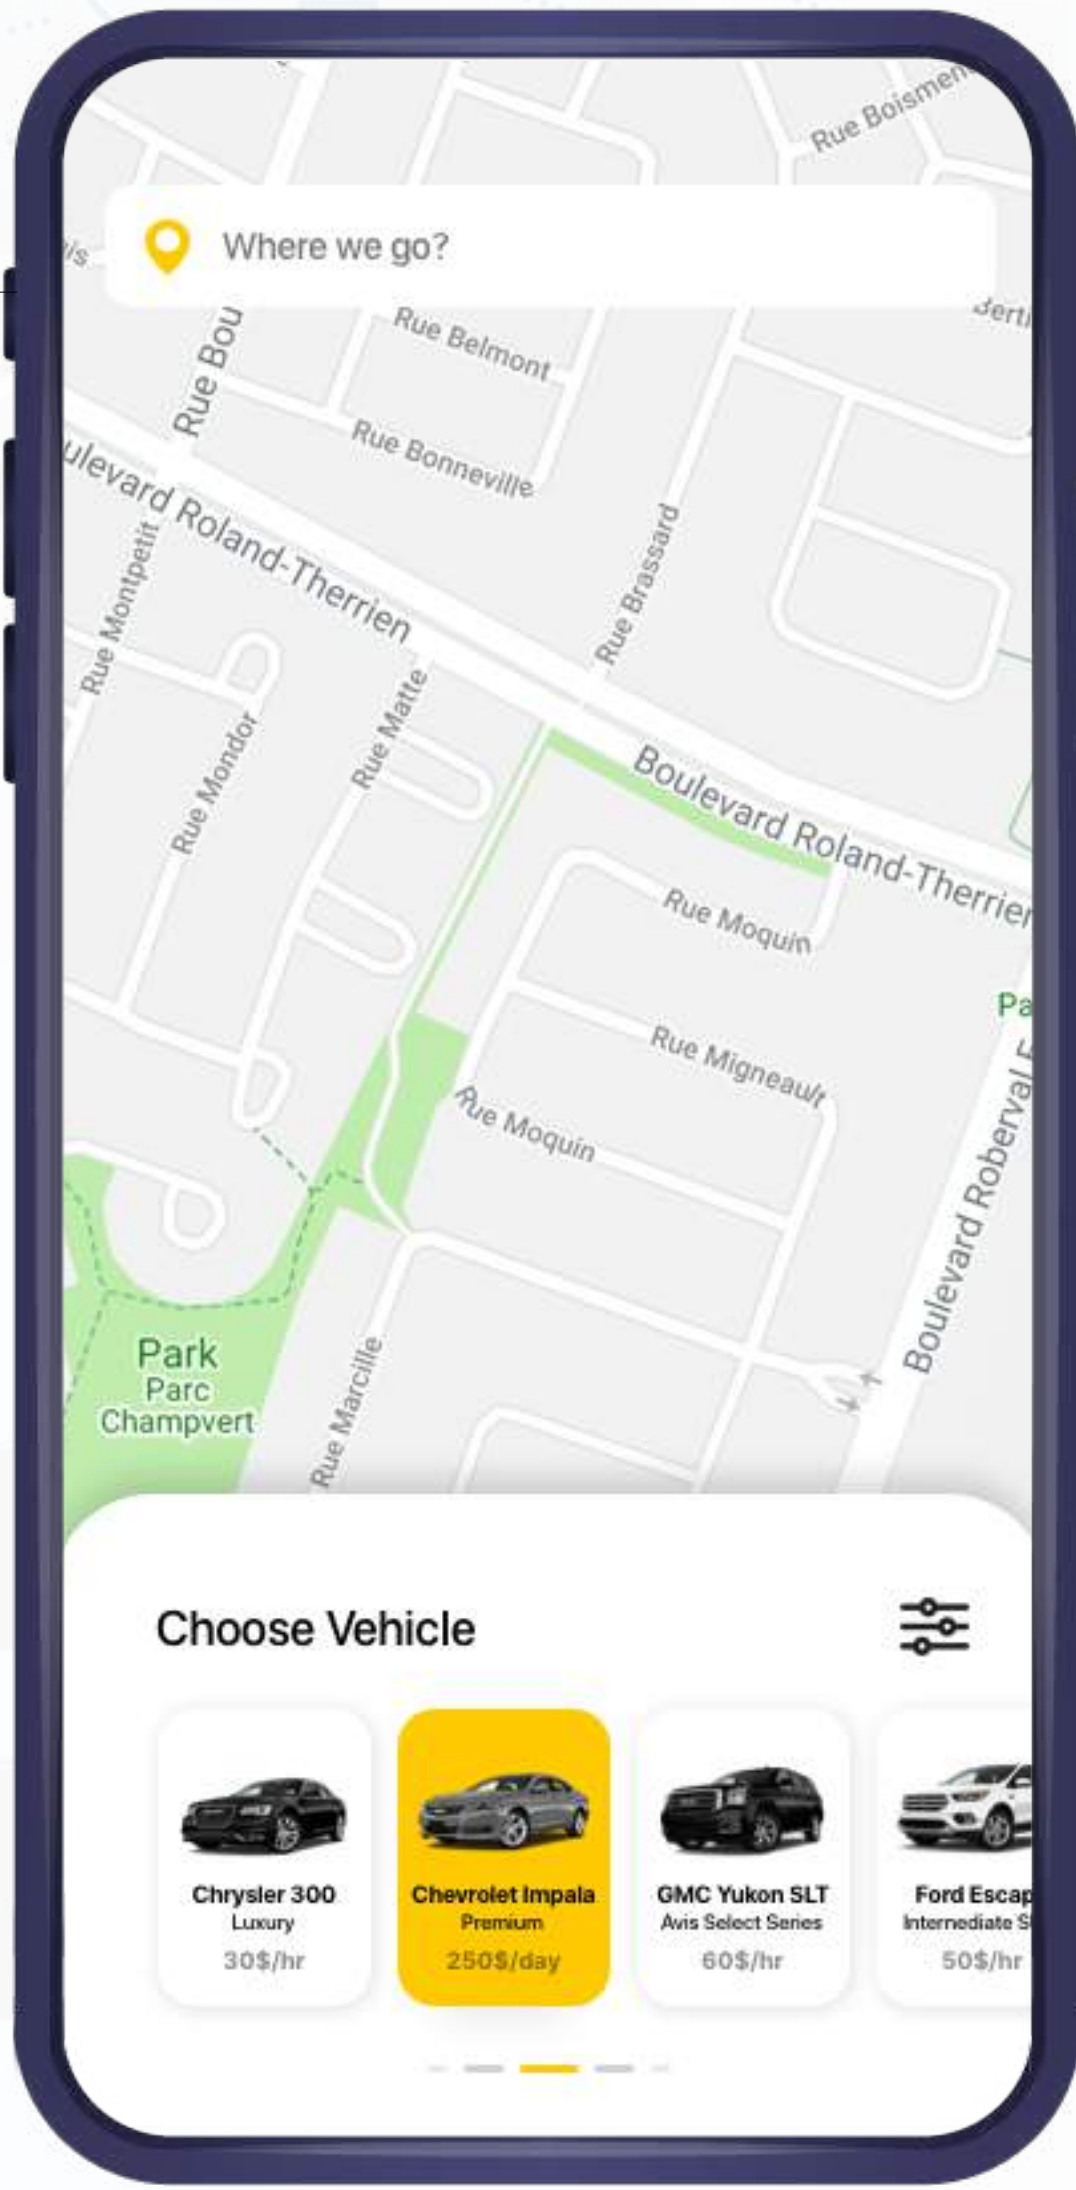

Hi, Your trains leaves in 50 mins from now, would you like to book a ride to the station? Later **Yes**

One intelligent integrated system

Connected Transit to and from Station

Brightline smart stations connect to convenient transportation such as **Uber, Lyft book a ride/ share taxi, metro rail** and **car rentals** with directions to and from station

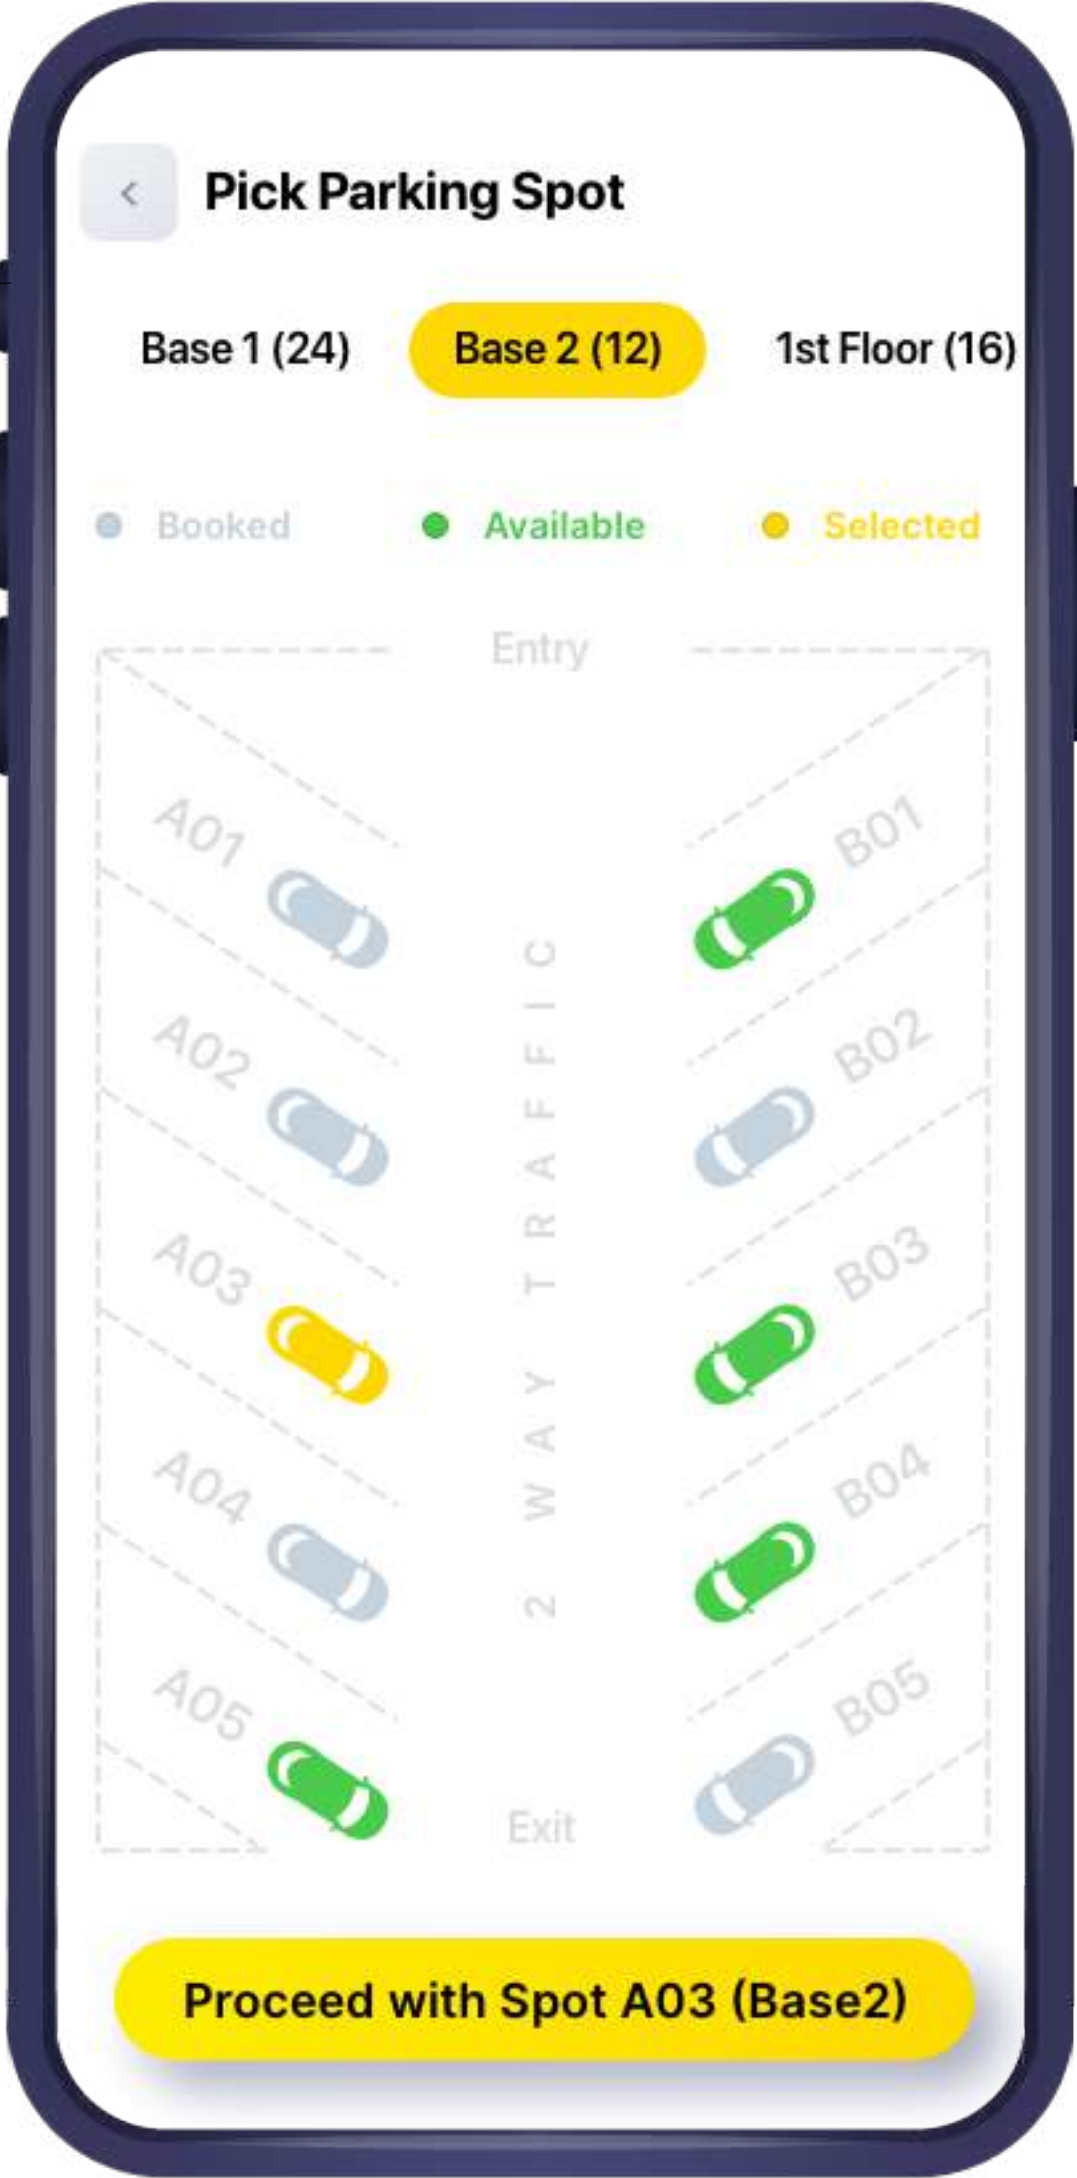

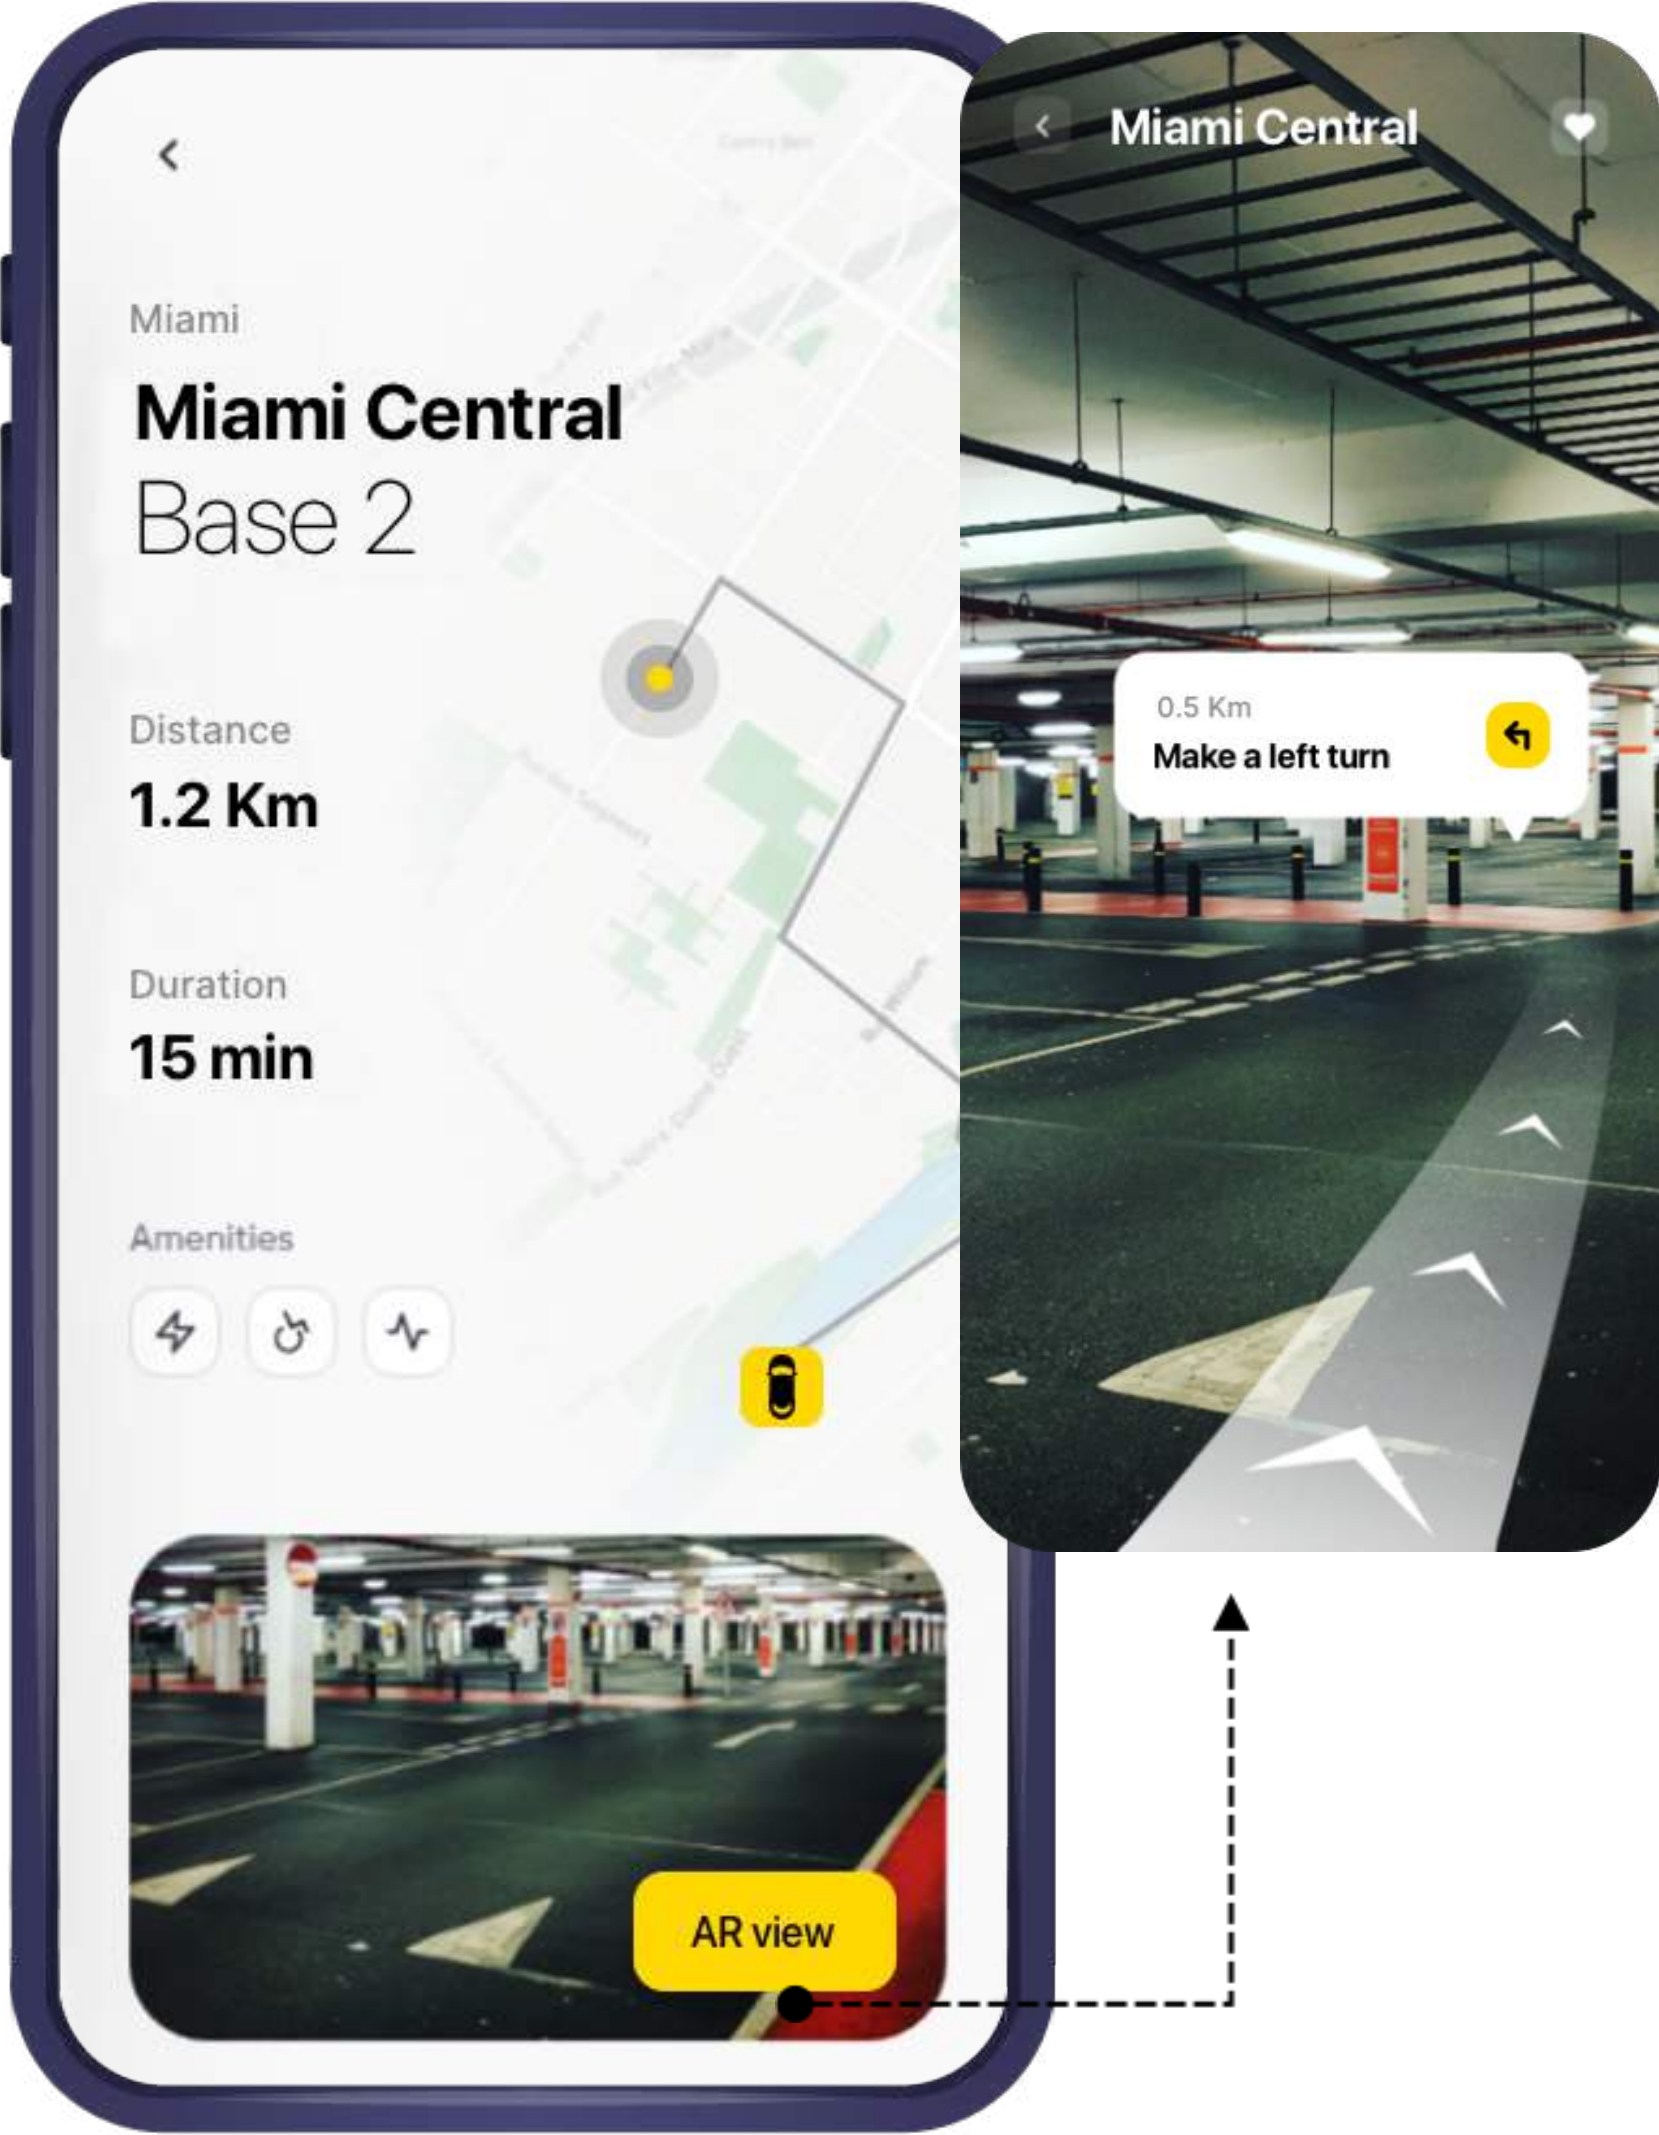

Smart Parking

Parking **assistance** with **navigation support**

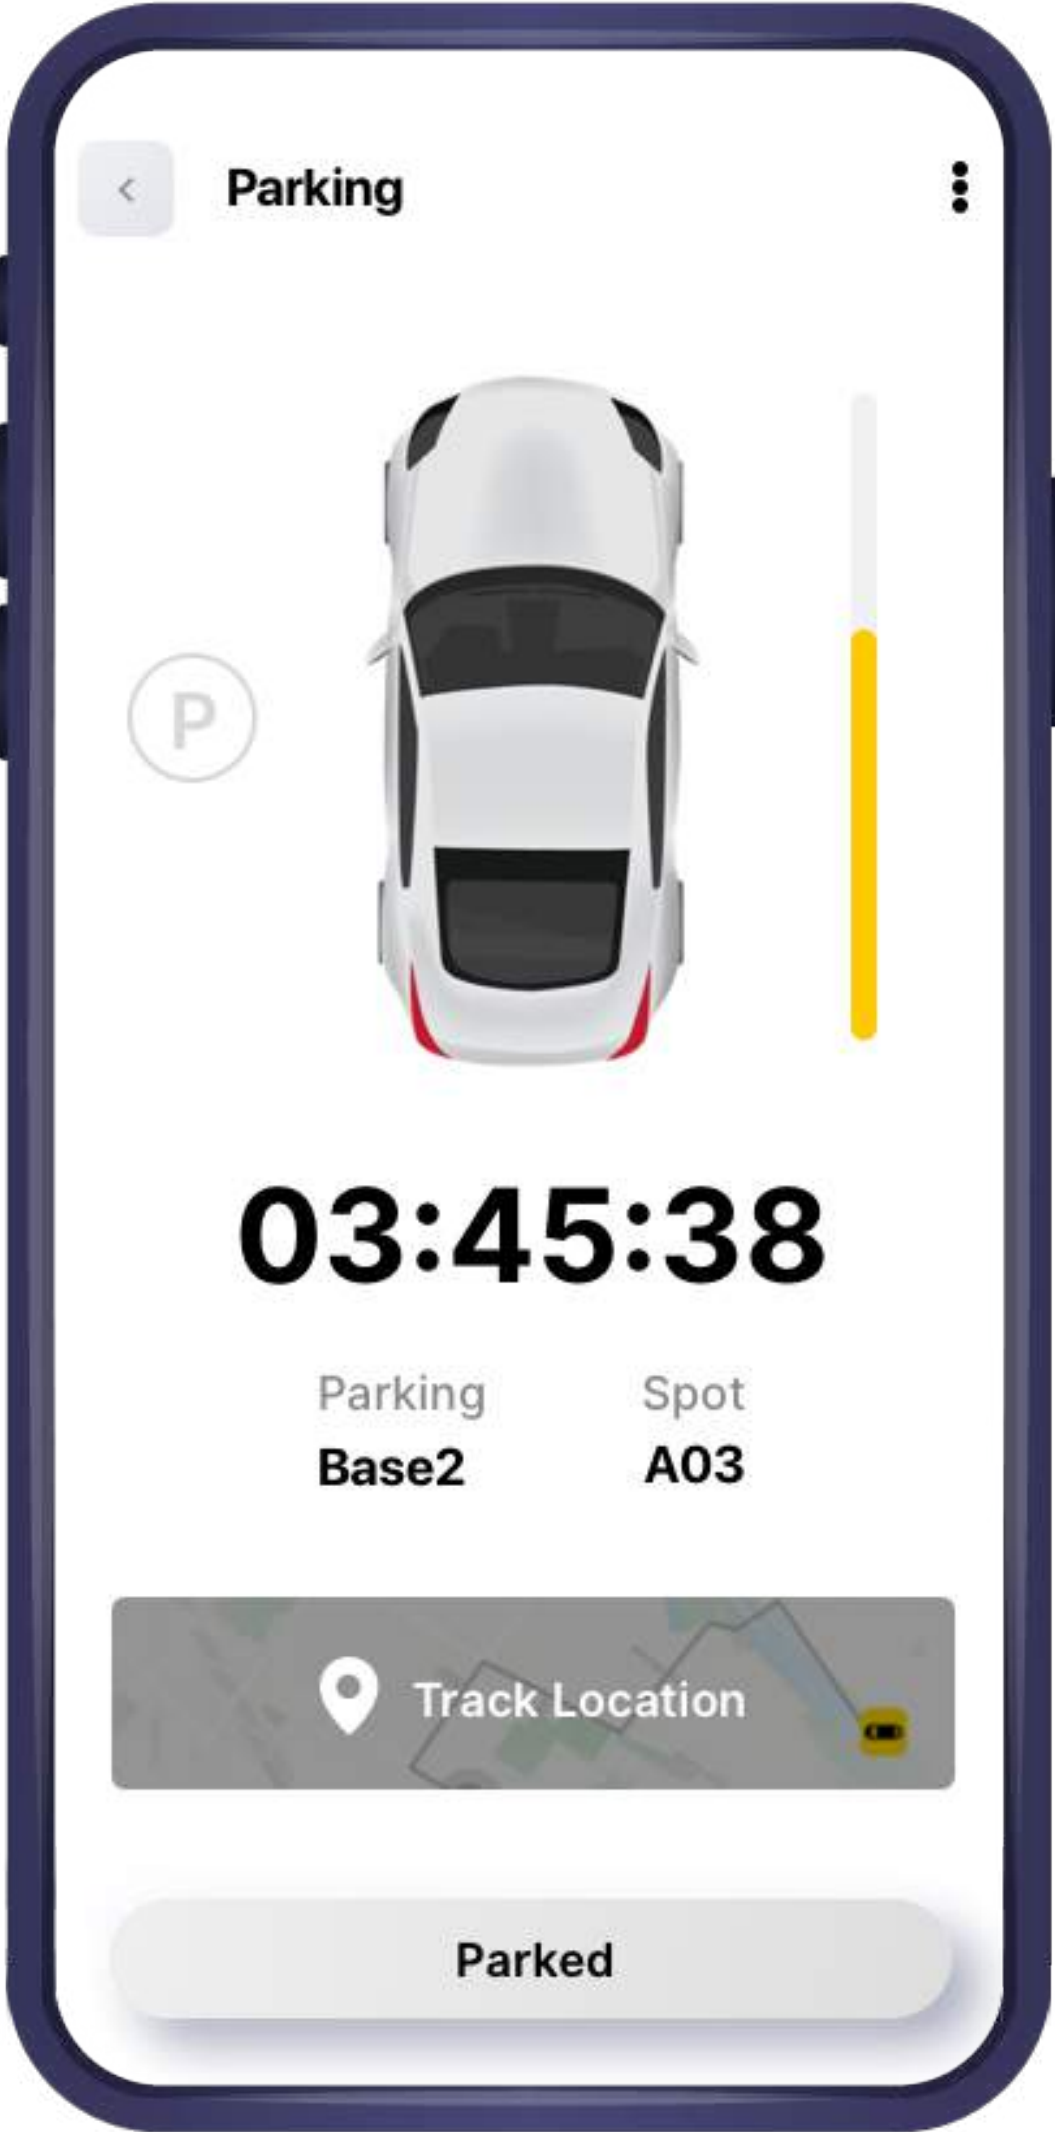

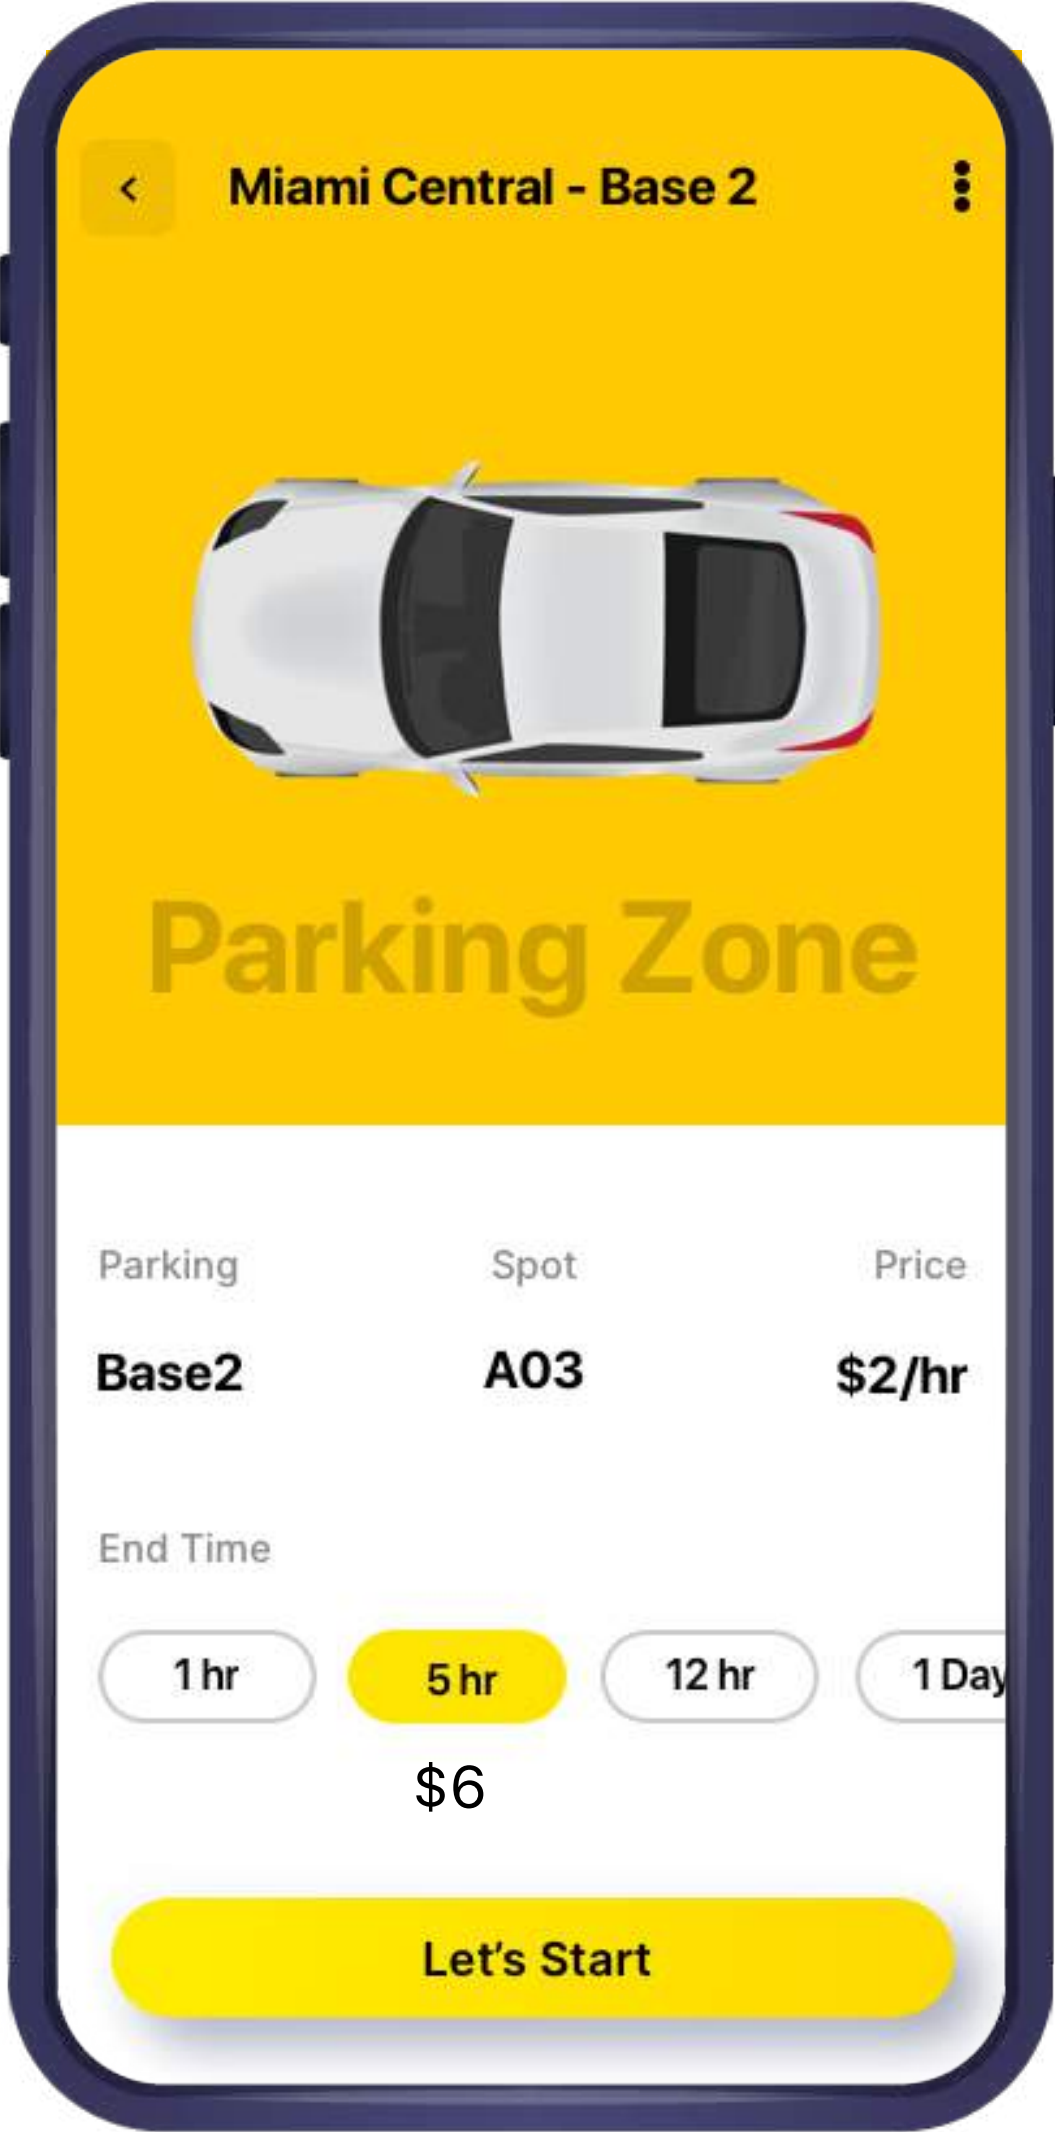

The technology **identifies your car size, space required** for parking, **locates** an empty spot and helps you navigate to the parking slot

Remembers your parking location for easy tracking and guides you to your reserved parking spot

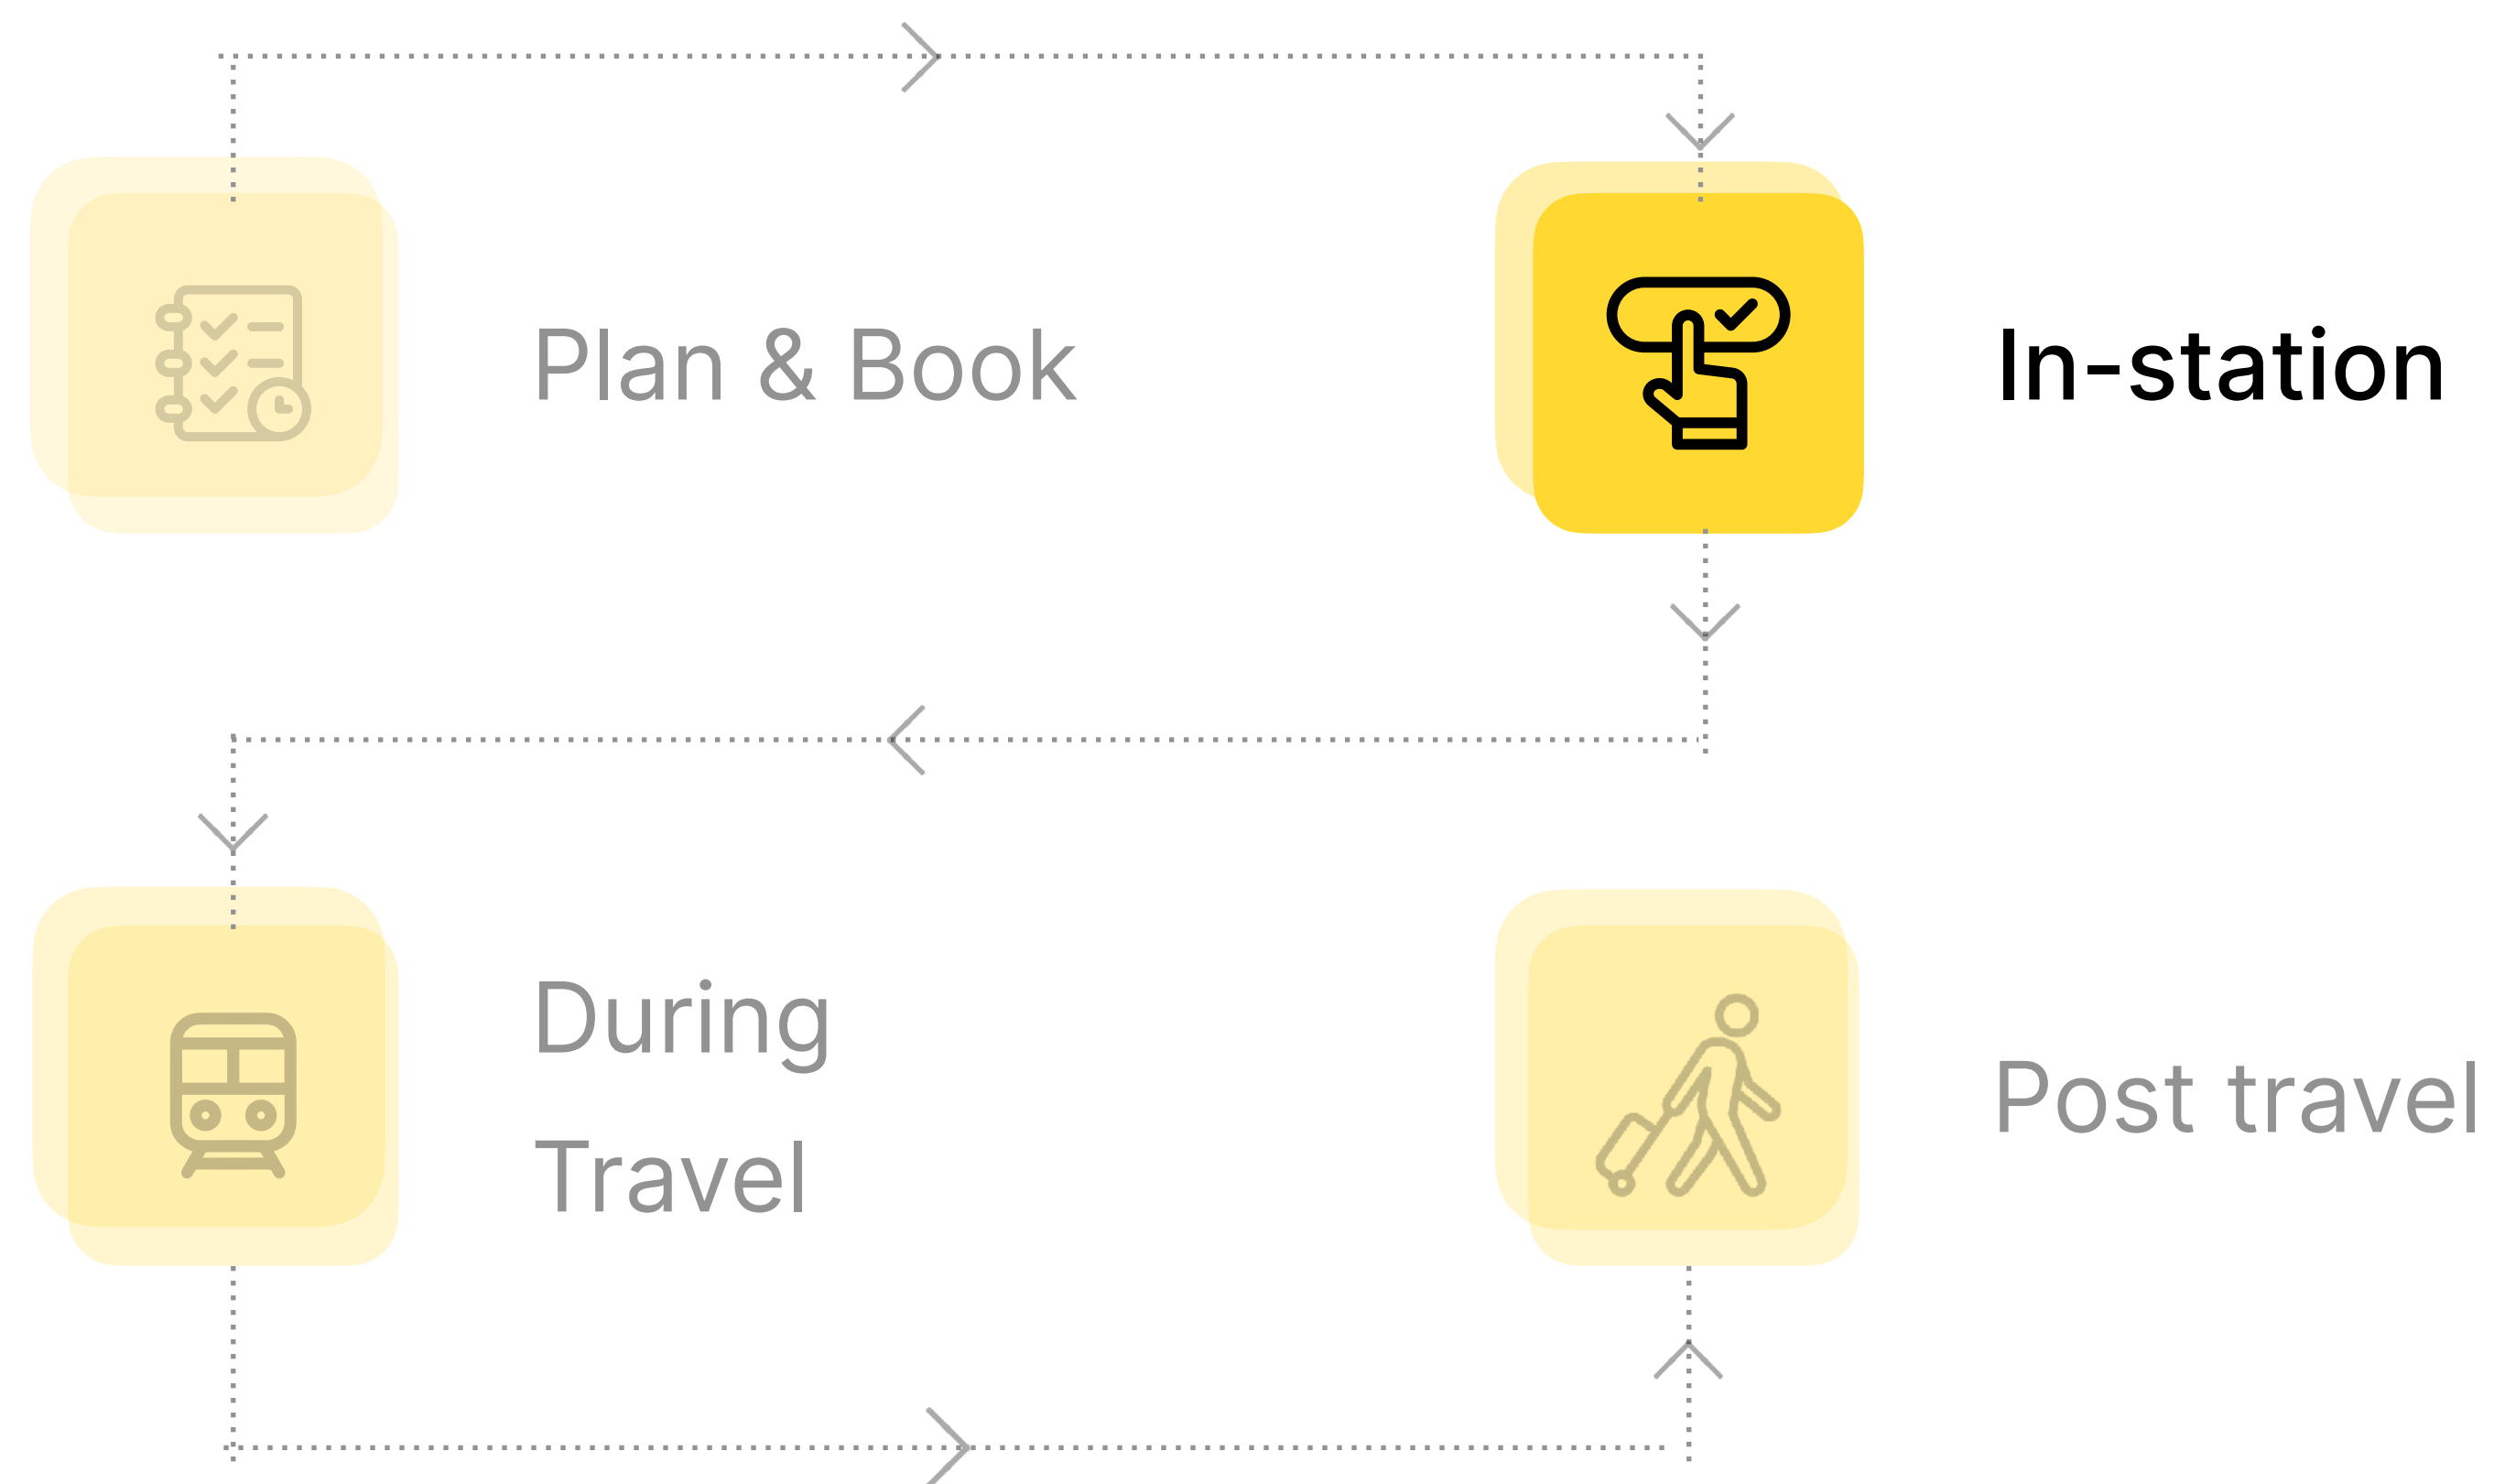

AR way finding system

advertising

Store Shopping

Contactless
Payment

NFC Distancing Alert

Seamless Security Check-in

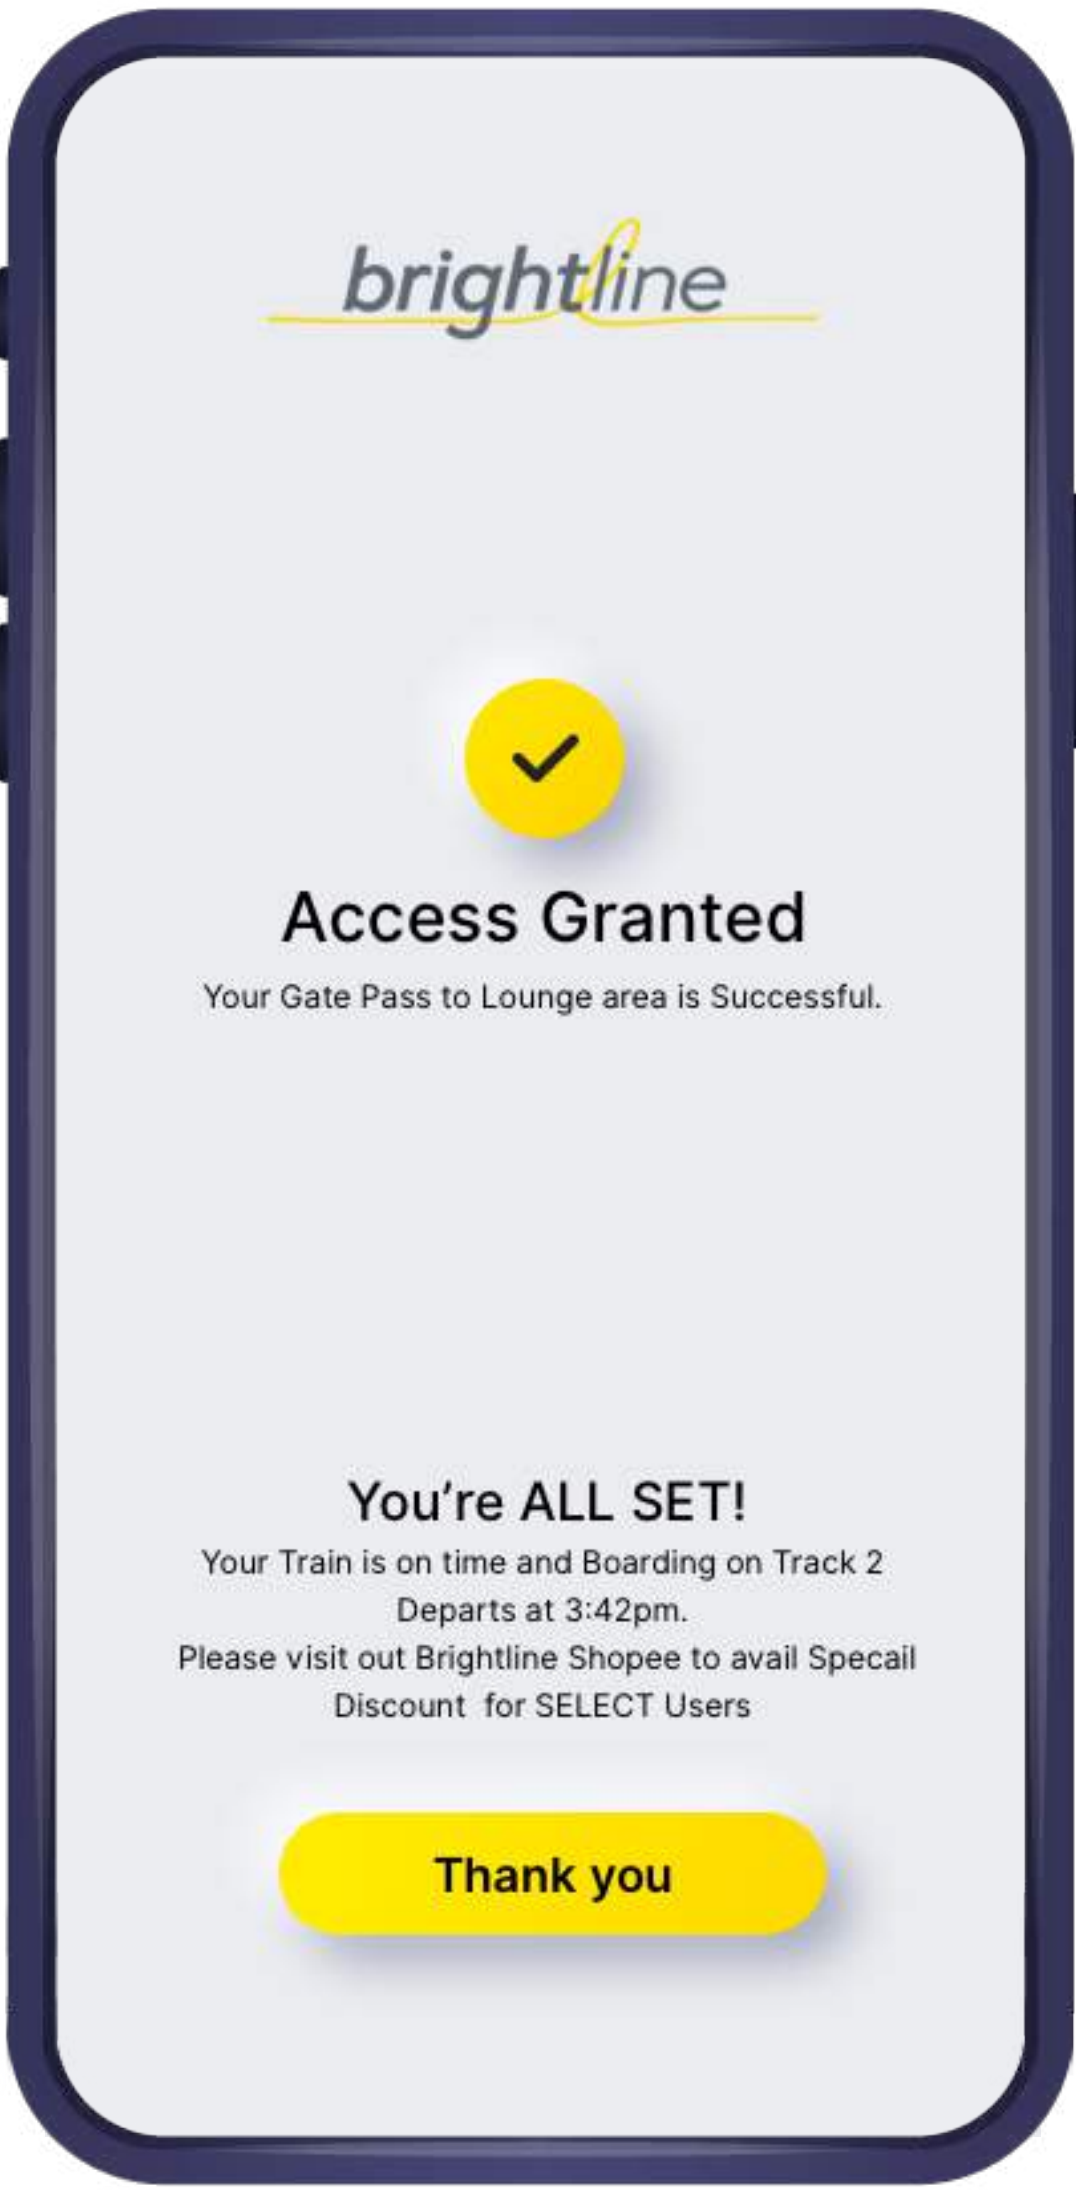

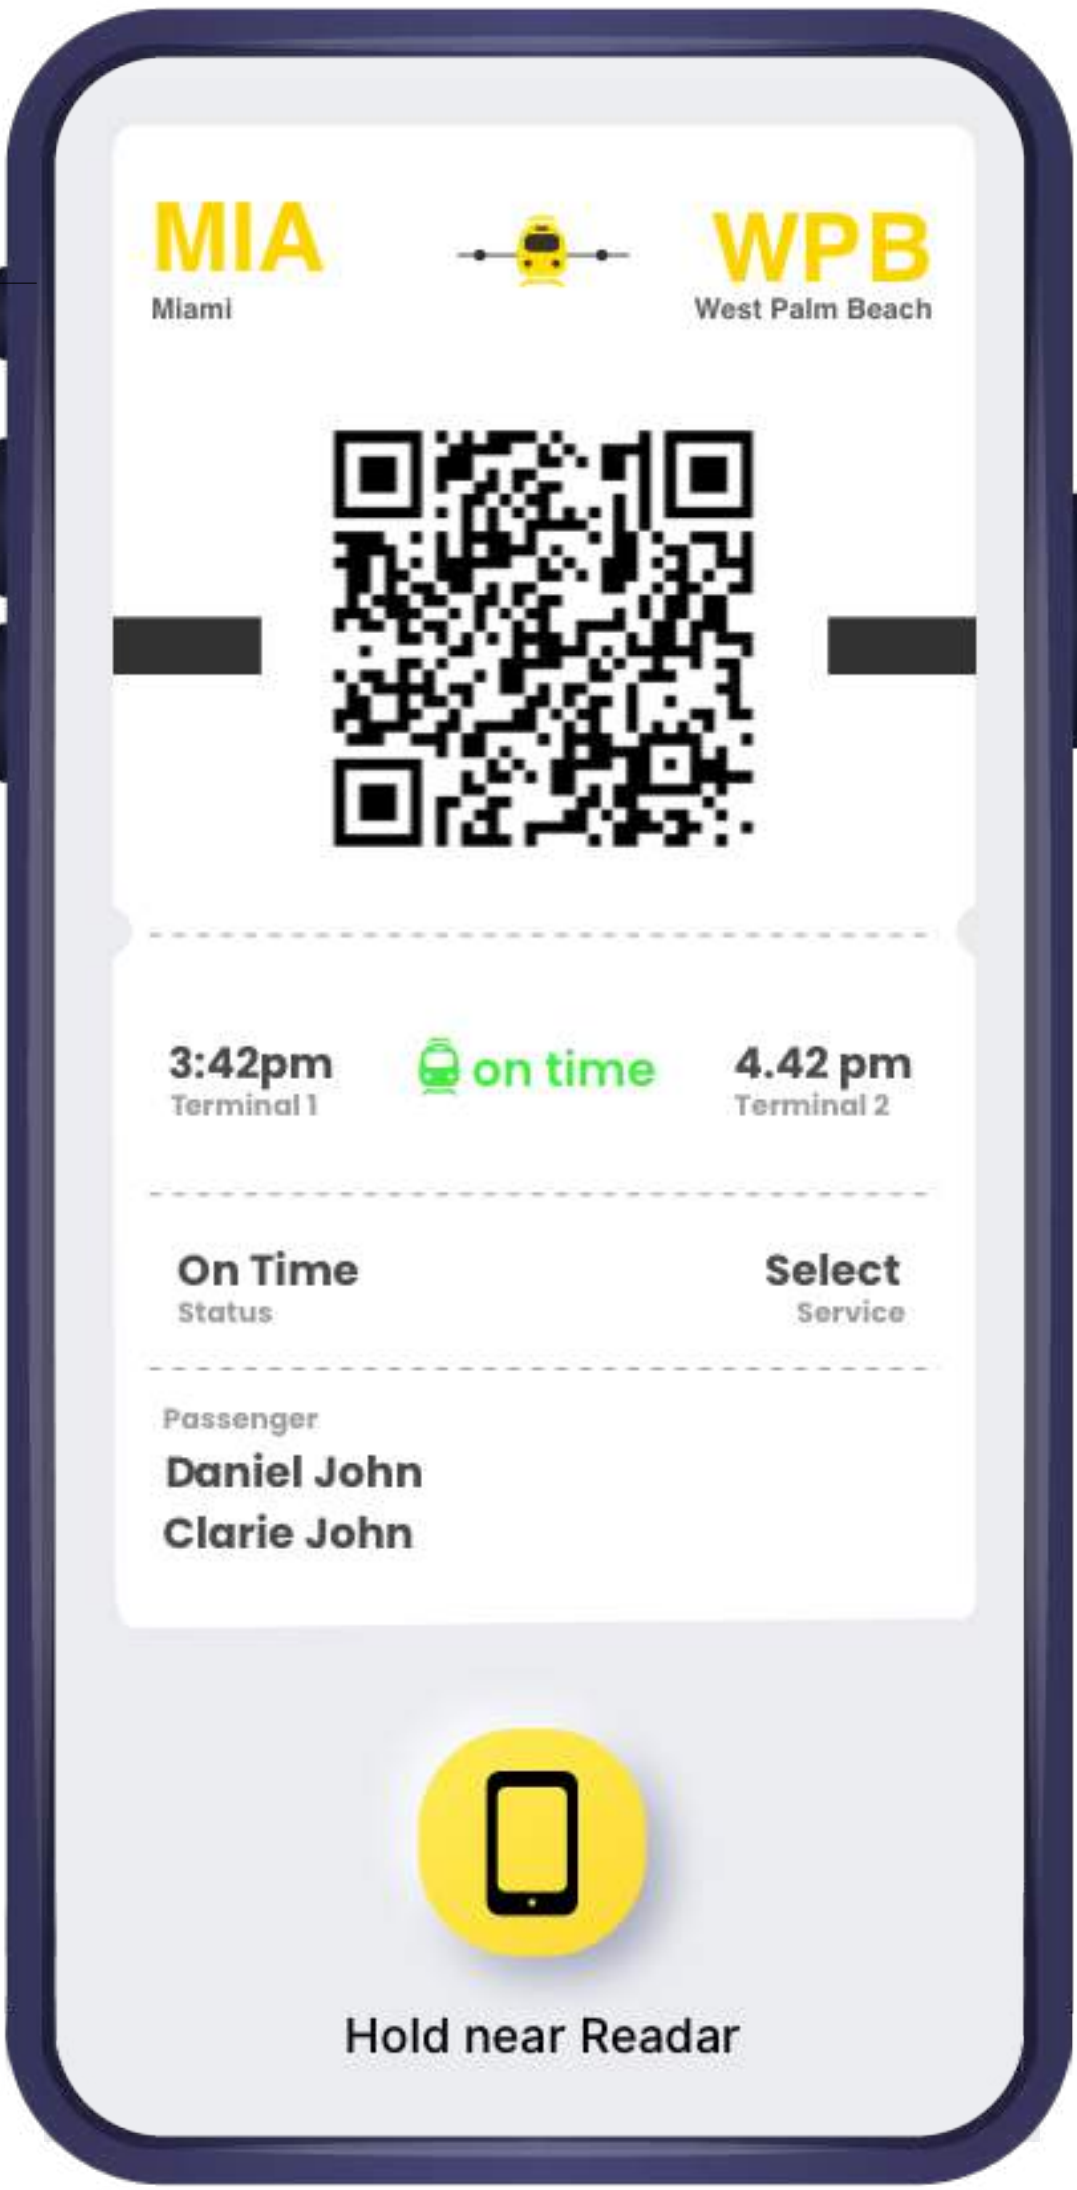

Passengers can **walk-through** and **check-in**, while simultaneously being screened for potential threats

Using **AI technology** the machine can distinguish between personal items and threats

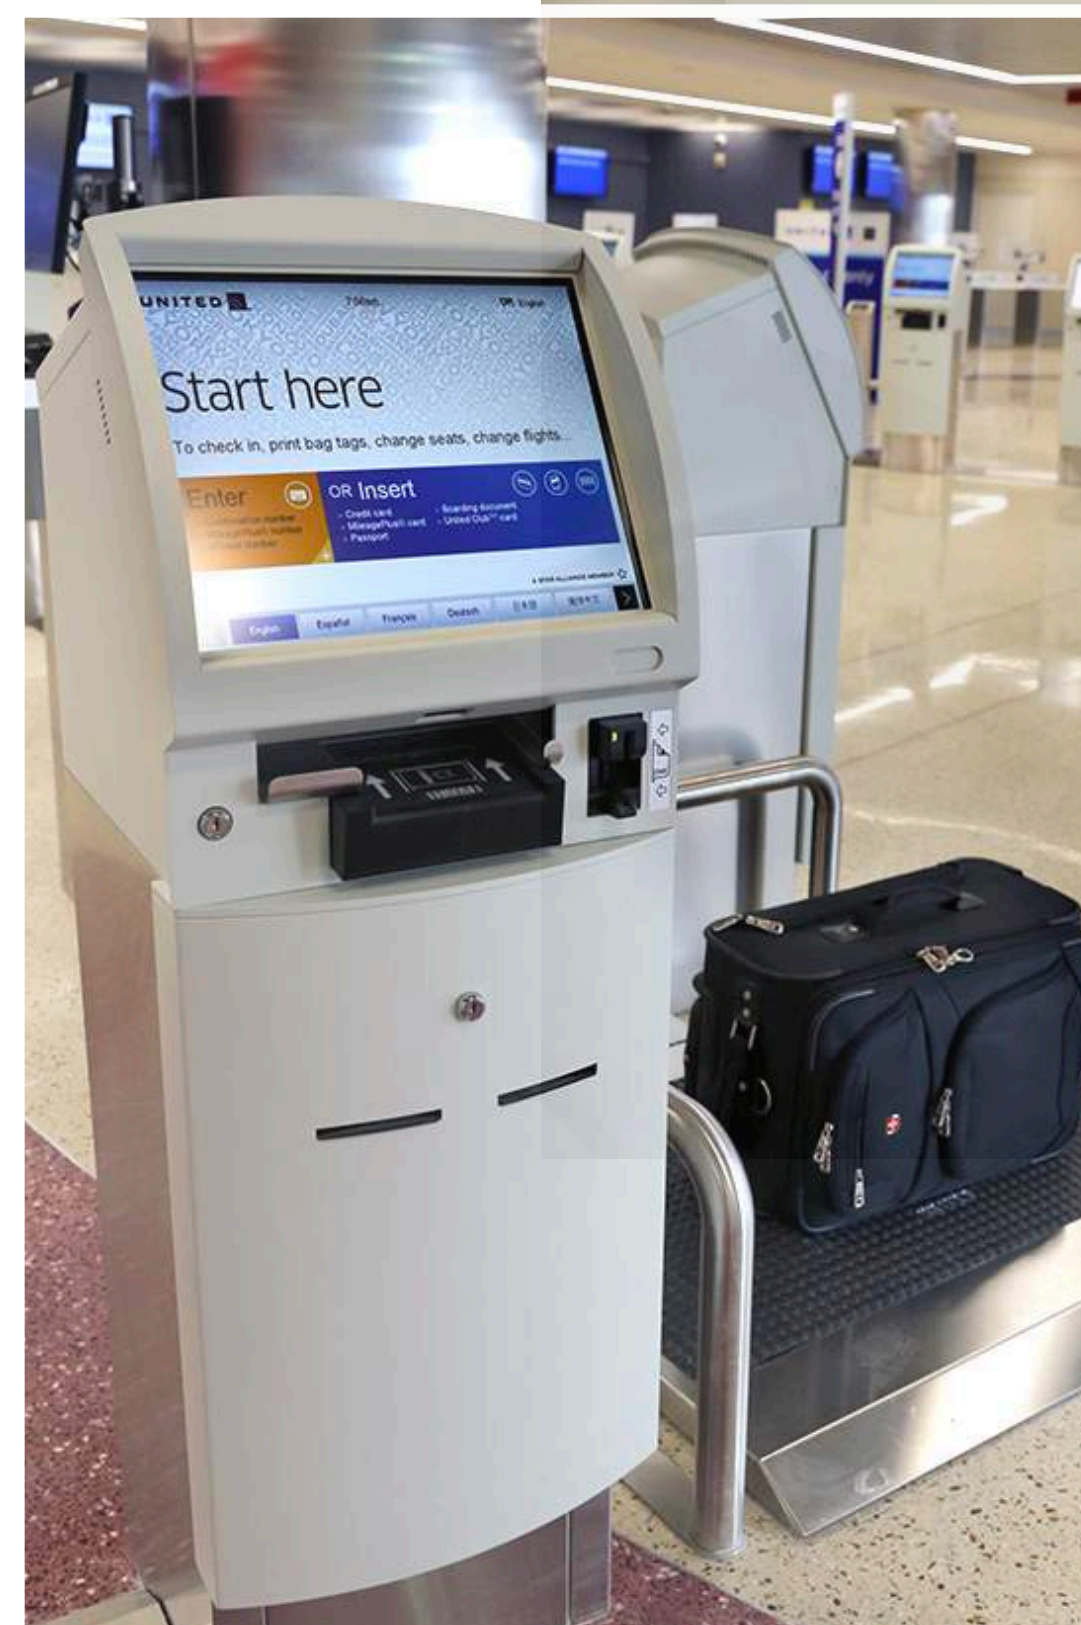

NFC for Ticket Scan & Identification

Scan an e-ticket for **quick identification** and a **seamless access**
This can also work as an **entry pass** at the station or a **transit pass**

Kiosk for Baggage Tags and Quick Check-ins

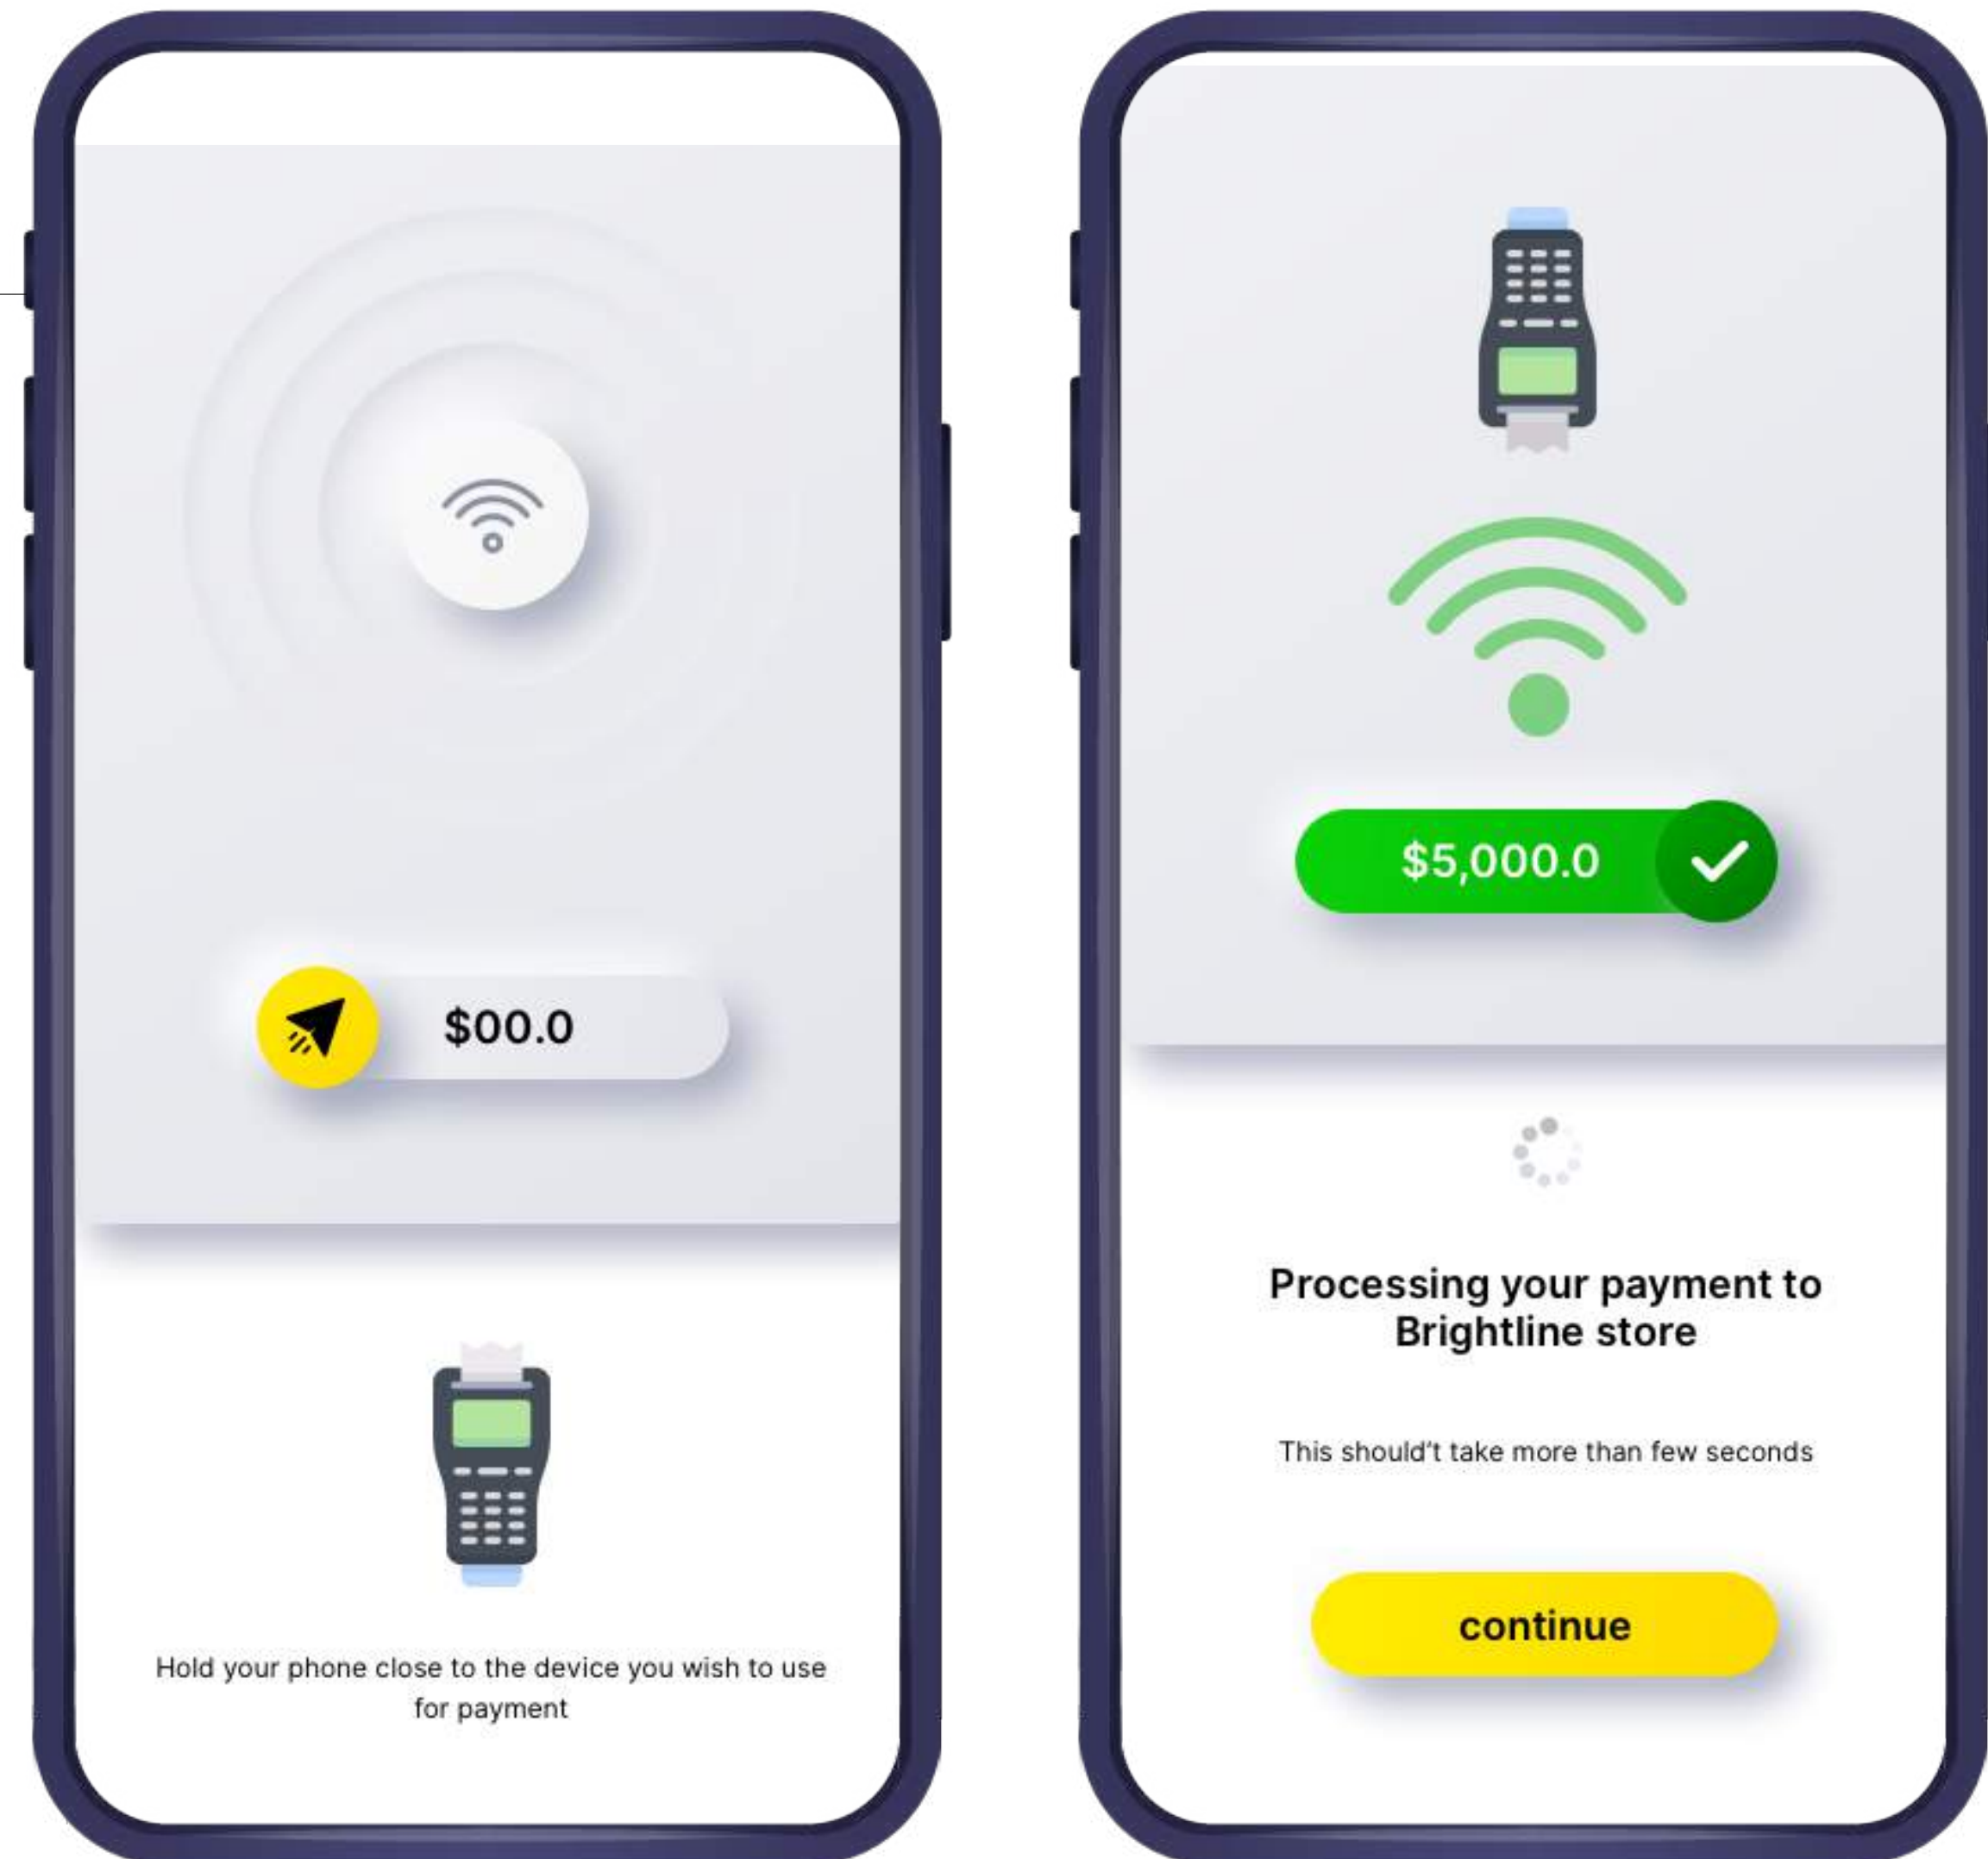

Scan the train tickets and **print** a QR tag for baggage drops and checkin

Contactless Payments

Visit the Brightline store and buy a merchandise with **NFC**. Quick and easy way to pay without a PIN

1. Scan the bill through wireless technology by tapping on 'Pay'
2. The system accepts the tap, it signals the customer with a beep and a green checkmark.
3. On receiving an approval the transaction is complete

Telepresence Customer Support

Constant 'Help' service through tele-presence customer support with individual screens. This access is to real life people available onscreen, which are **life-sized** and **three dimensional**

Travellers are made to feel as if they are getting an **in-person service**, where all their queries can get answered or even ask for tickets and route maps support

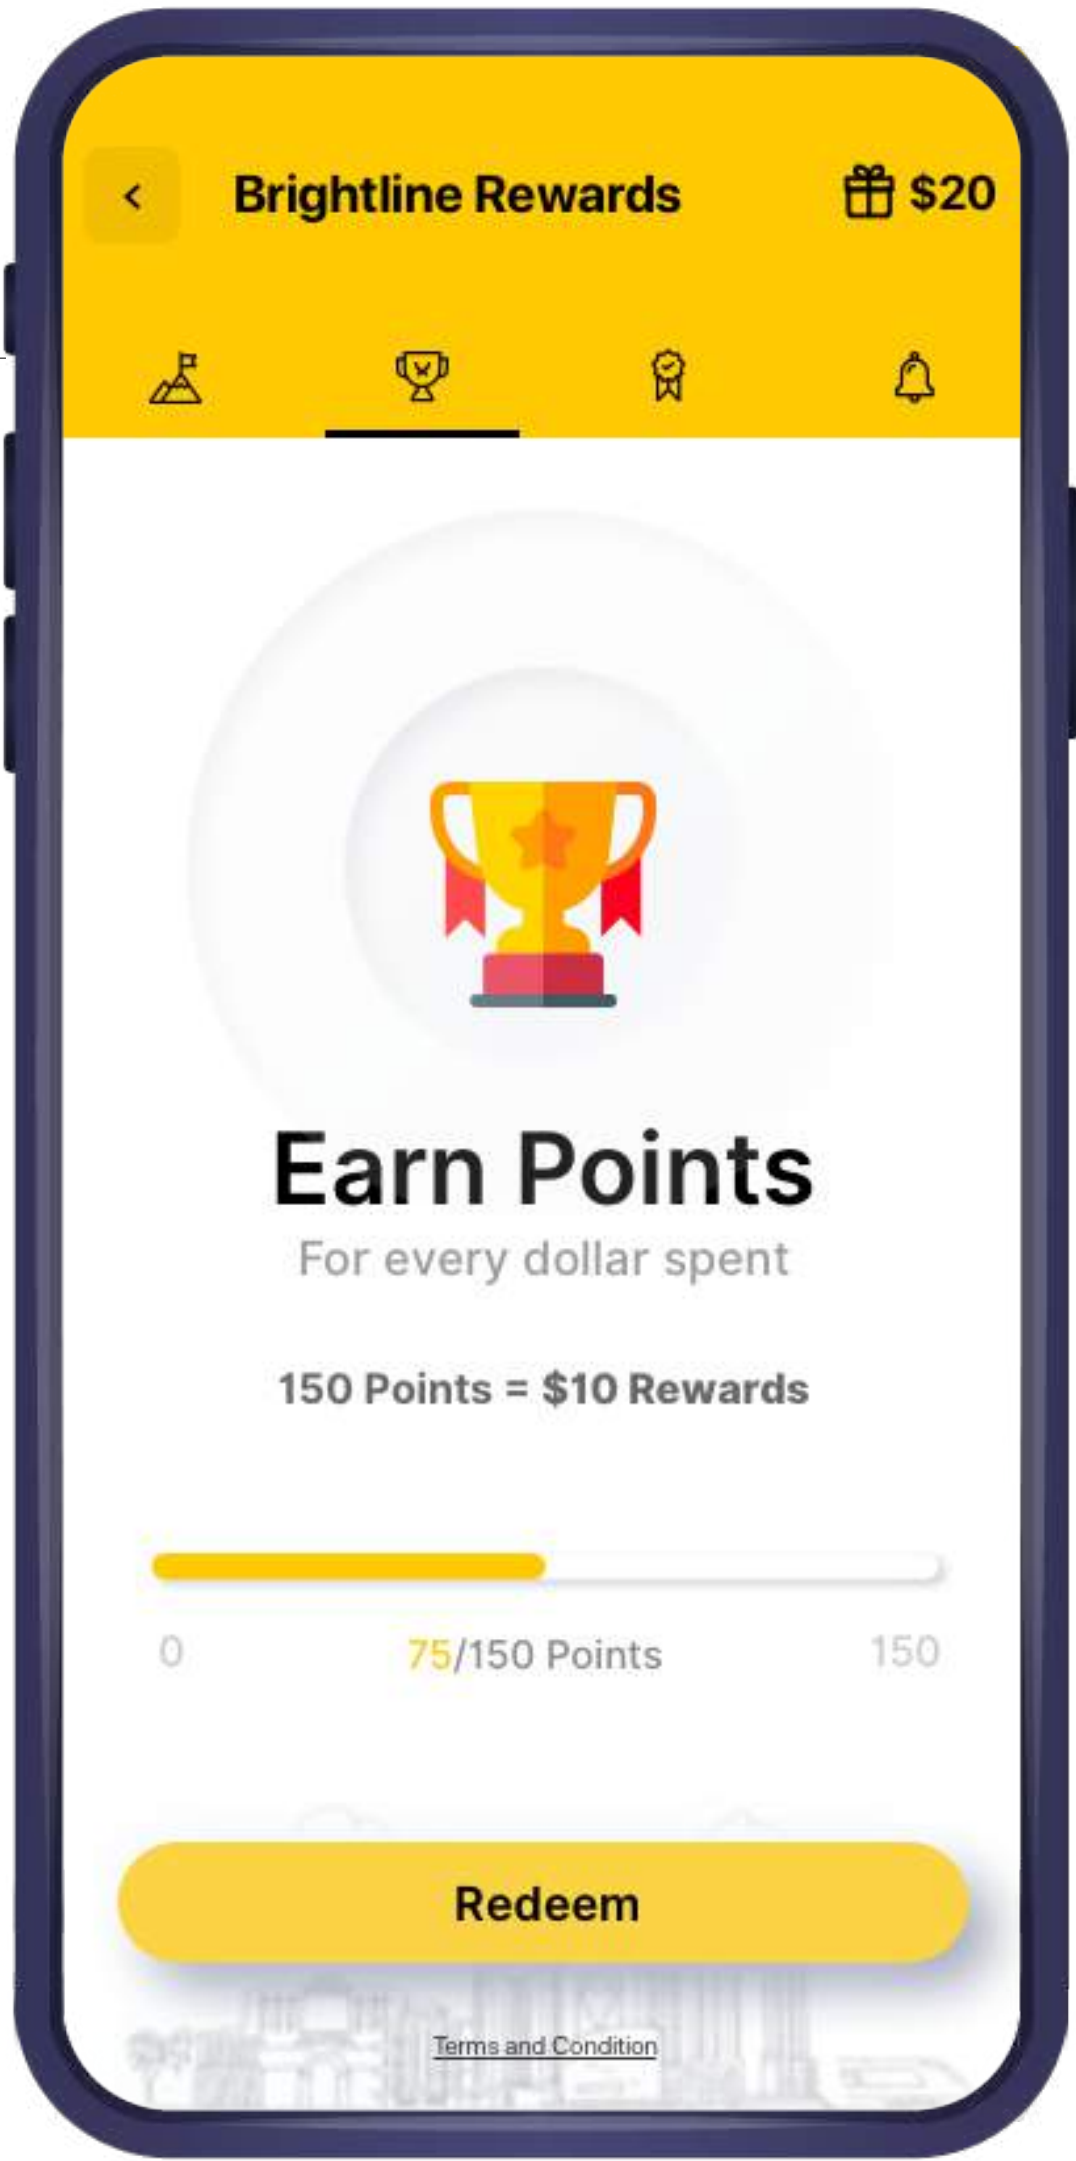

Loyalty & Engagement

Most frequent or **repeat travellers** avail special offers such as free **merchandise**, **rewards**, **coupons** and **discounts** on services

The traveller **earns badges** and **reward points** for every interaction

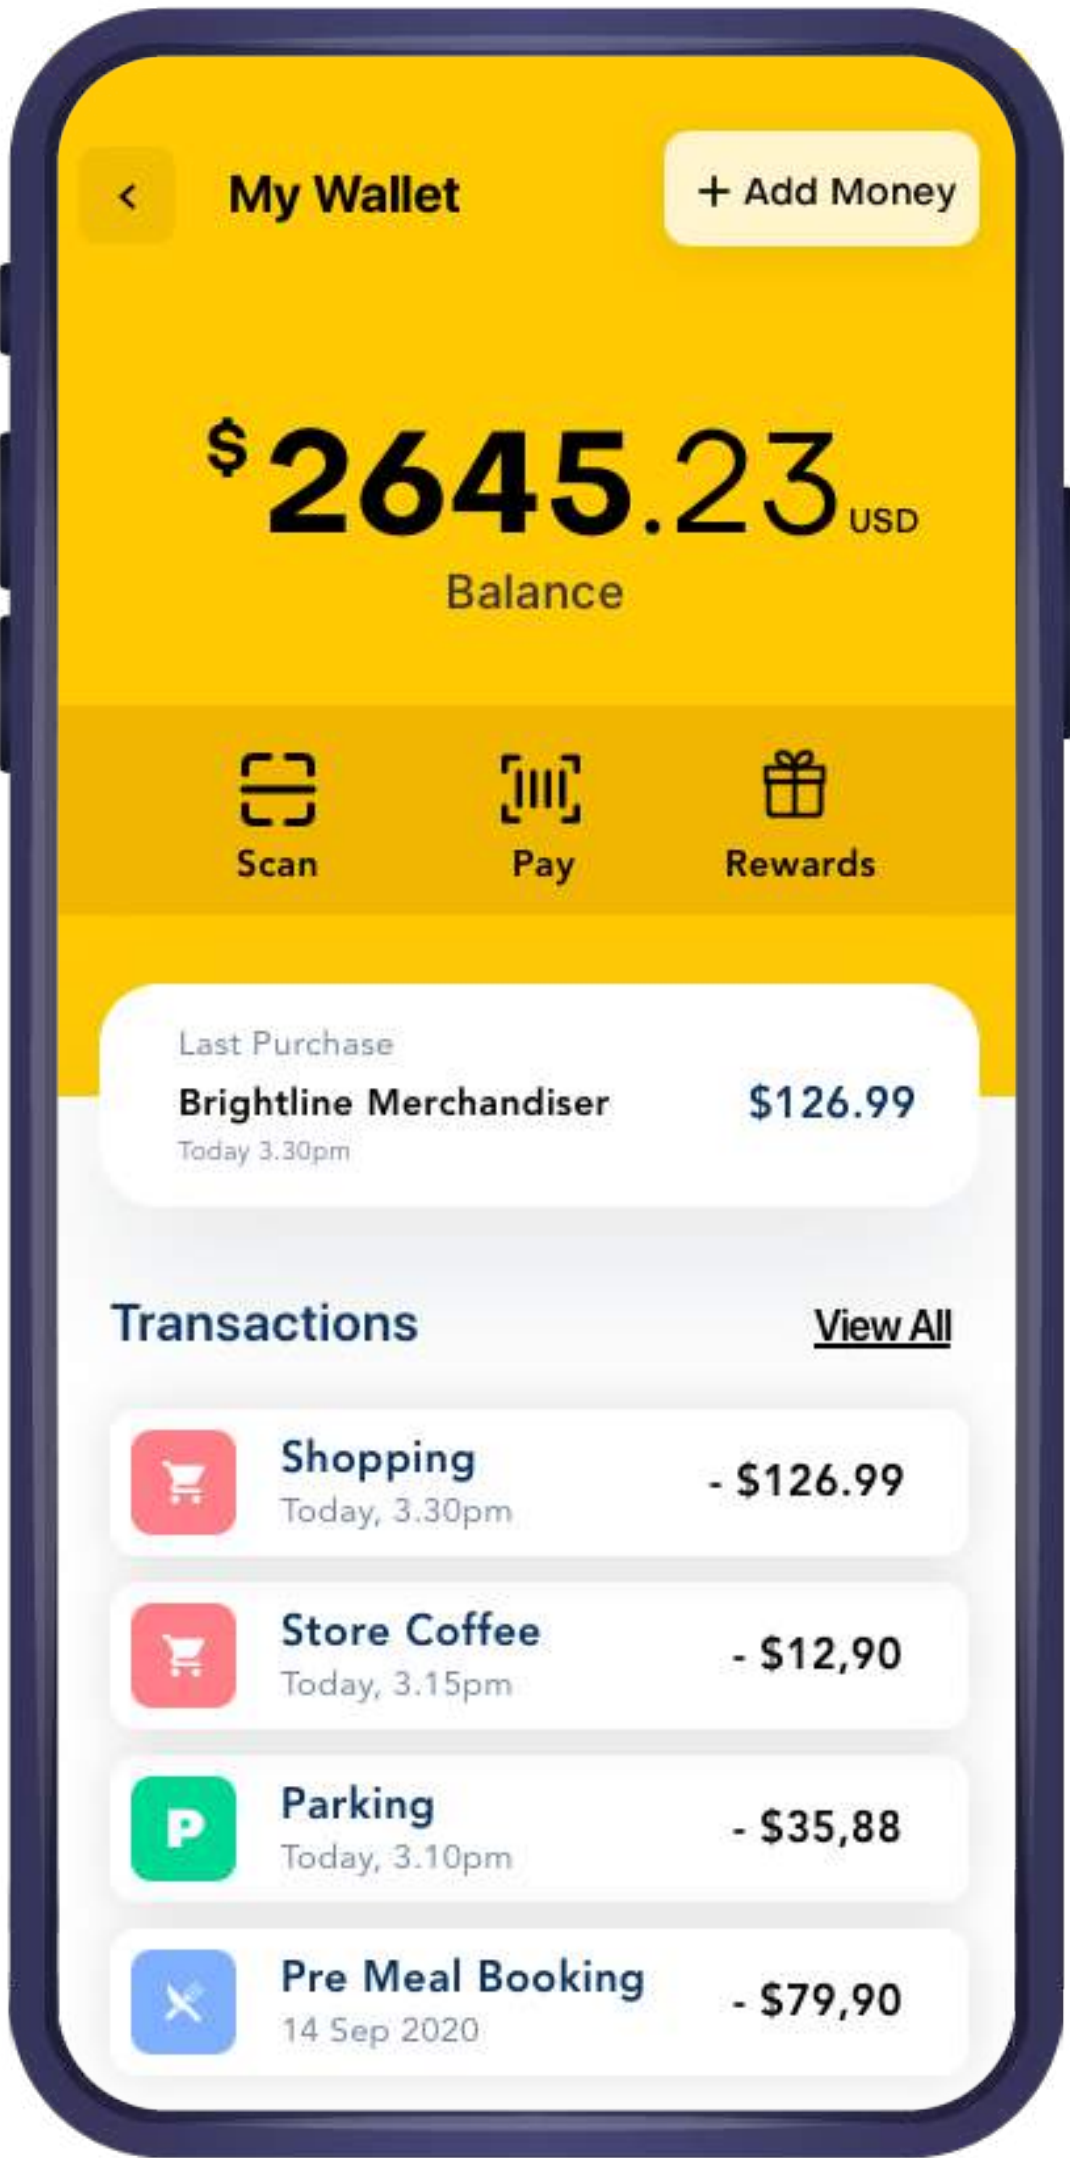

Wallet

Travellers can seamlessly make **payments** through the **wallet**

Use Wallet throughout the journey to get special **offers** and **discount coupons**

All transactions linked with loyalty & rewards

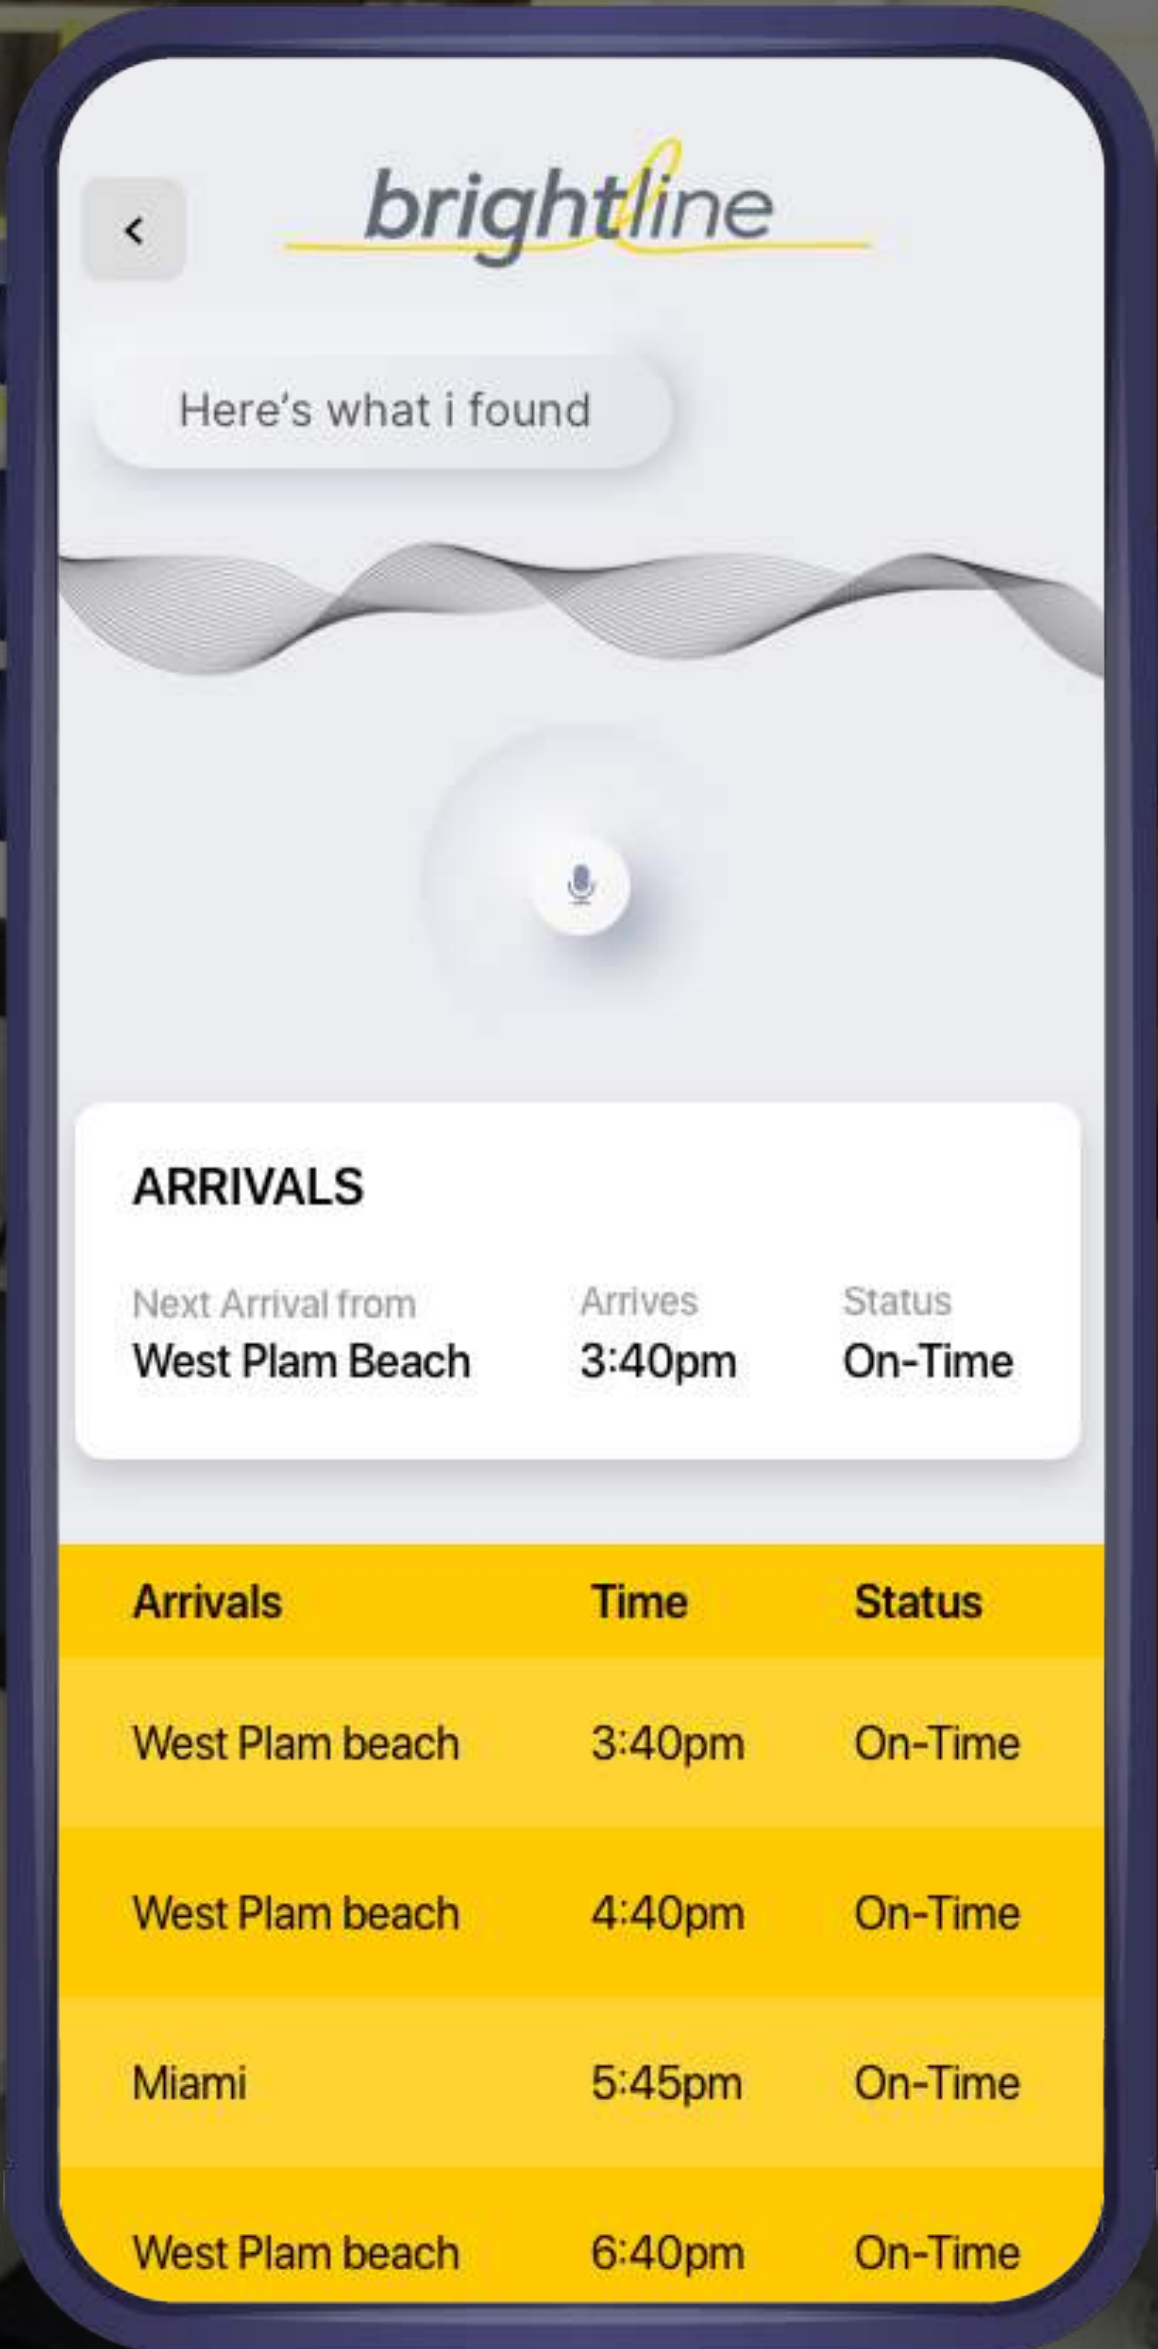

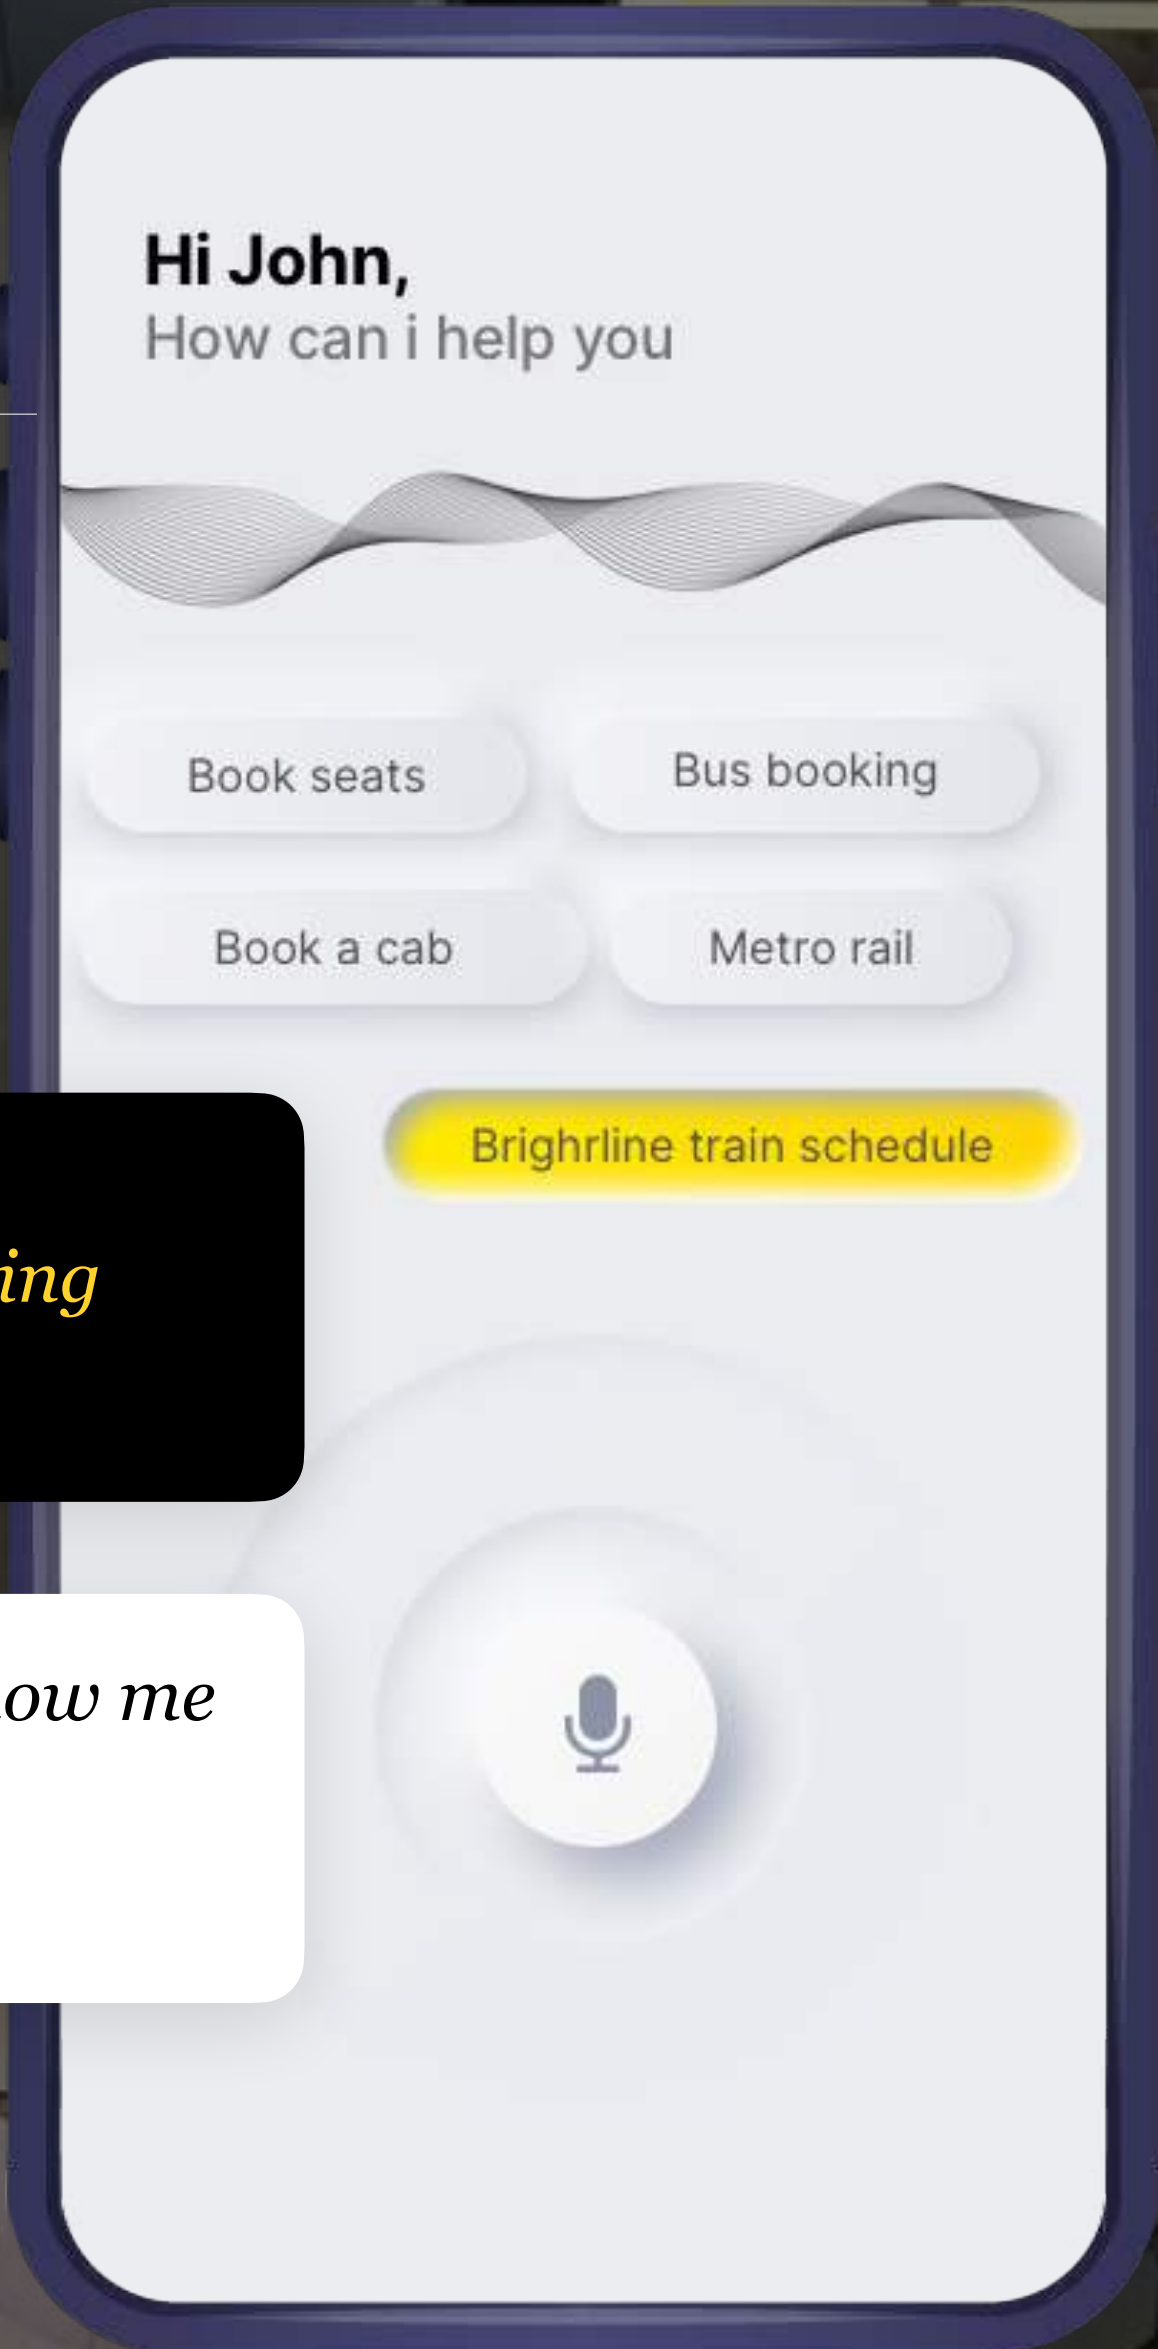

Voice Enabled Conversations

Alexa skills, Siri, Google Assistant

Using voice commands the **AI virtual assistant** helps you select and book seats for your travel, check train schedules, selects options on connected transit or even find a nearby restaurant

“Alexa, launch Brightline booking service”

“Hey Google, show me the restaurants nearby”

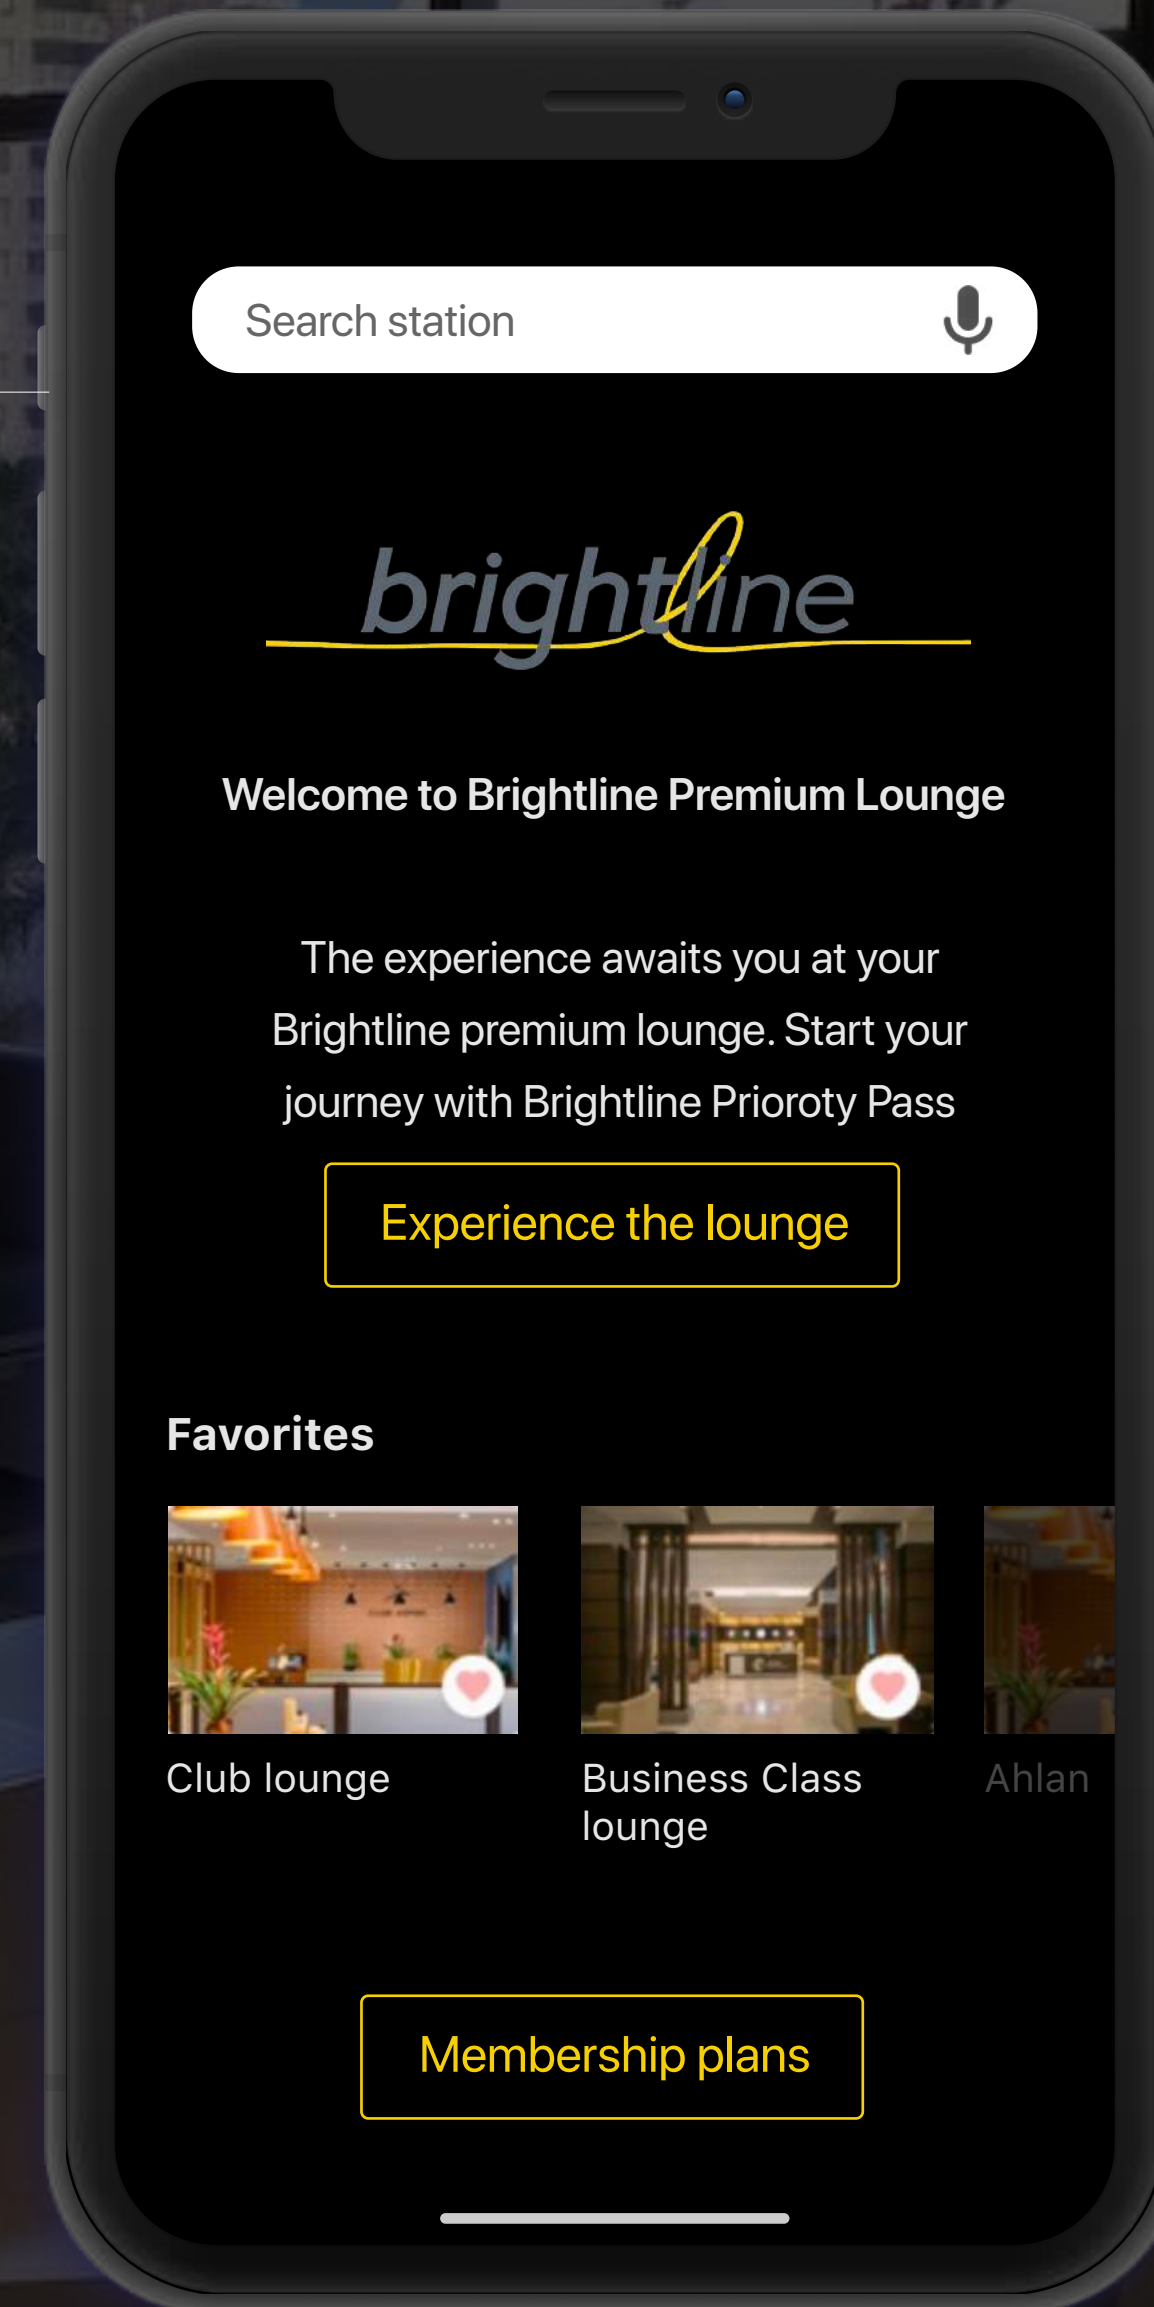

Premium Lounge Access

Trigger timely **push notifications** to SELECT travellers to enjoy and relax at the premium lounge before departures or on arrival at all Brightline stations.

Recommend **customised** meals and facilities they can explore.

All transactions linked with loyalty & rewards

3D Holographic Display

3d holographic projections used at the station, to create a **magical experience** and for Brightline and other brand promotions

Travellers can **interact** with the holographic screen and **experience** and **learn** interesting facts and know more about the brands.

Interactive screens for travellers to discover more about the brands and Brightline station

Store Shopping

Beacons to push relevant messaging
Notifications with exciting shopping offers and
coupon codes for loyal customers

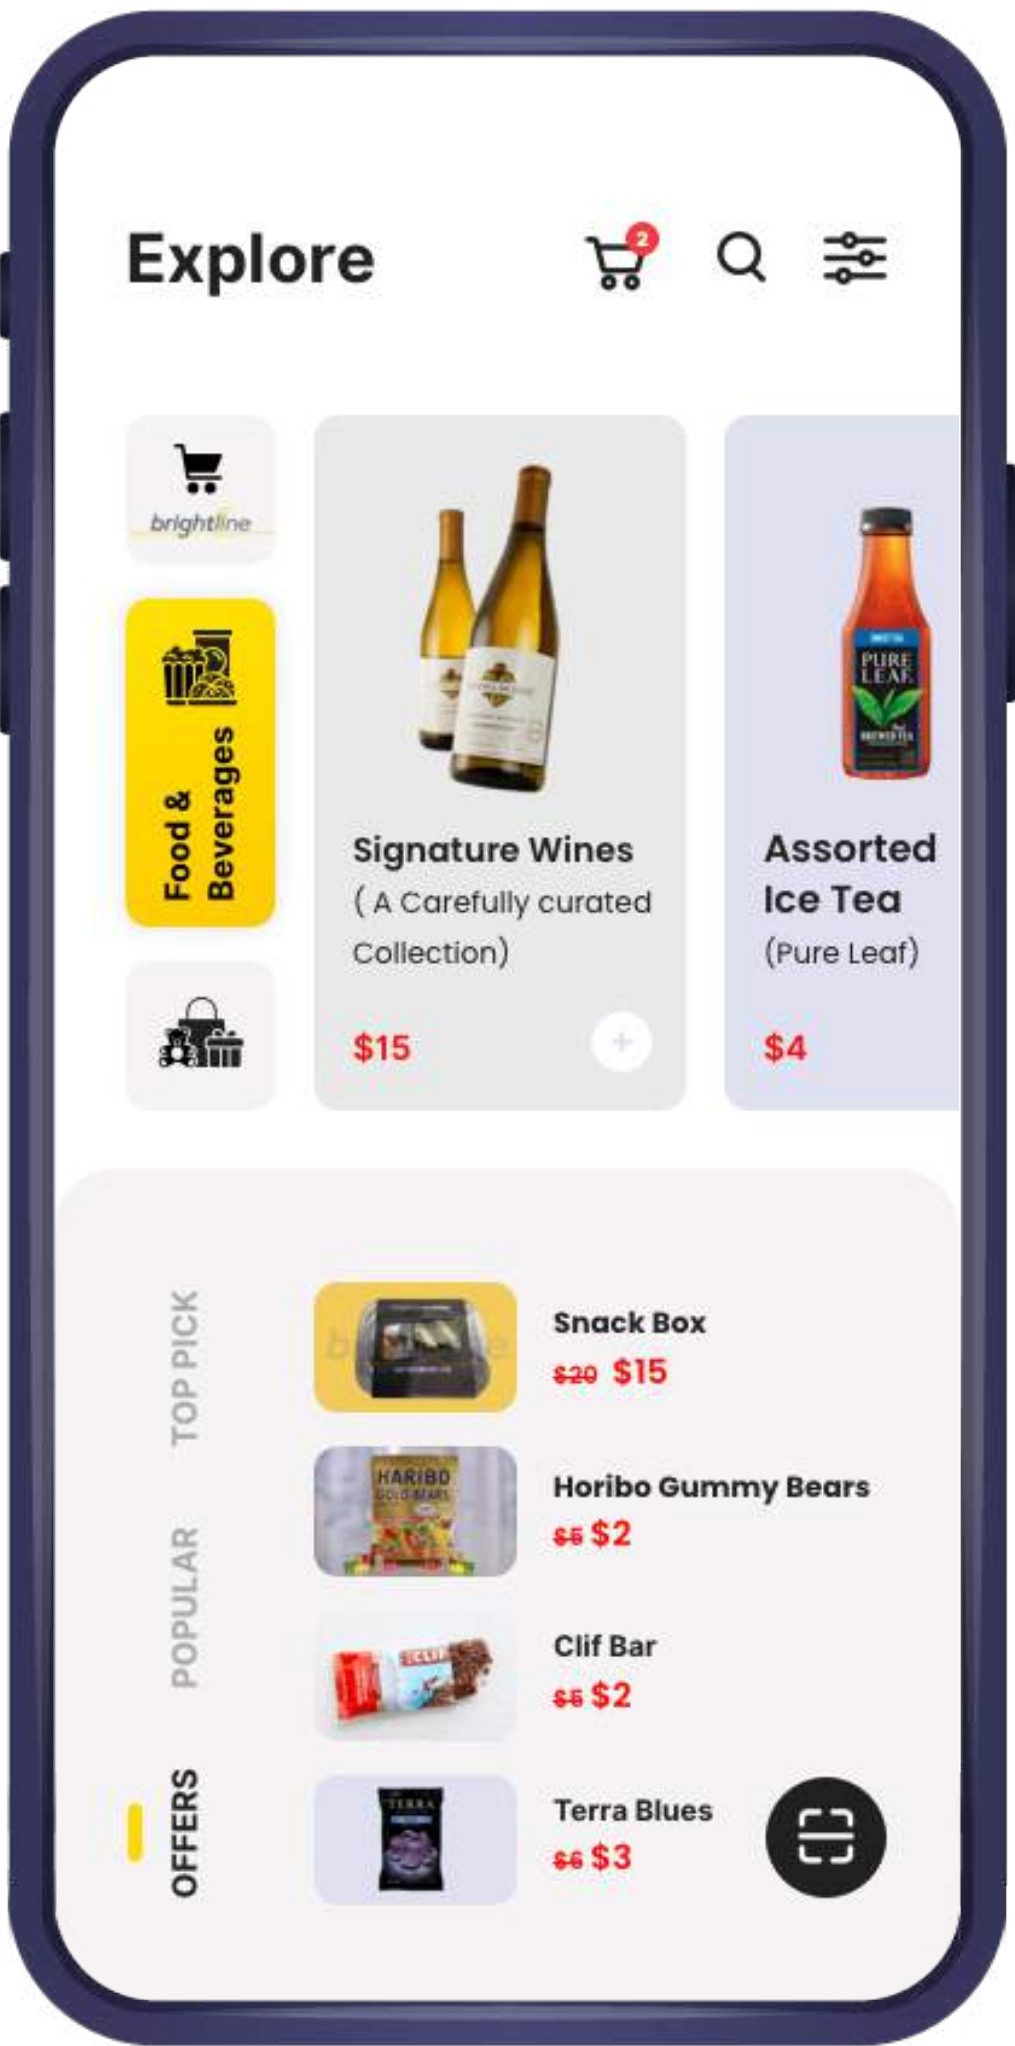

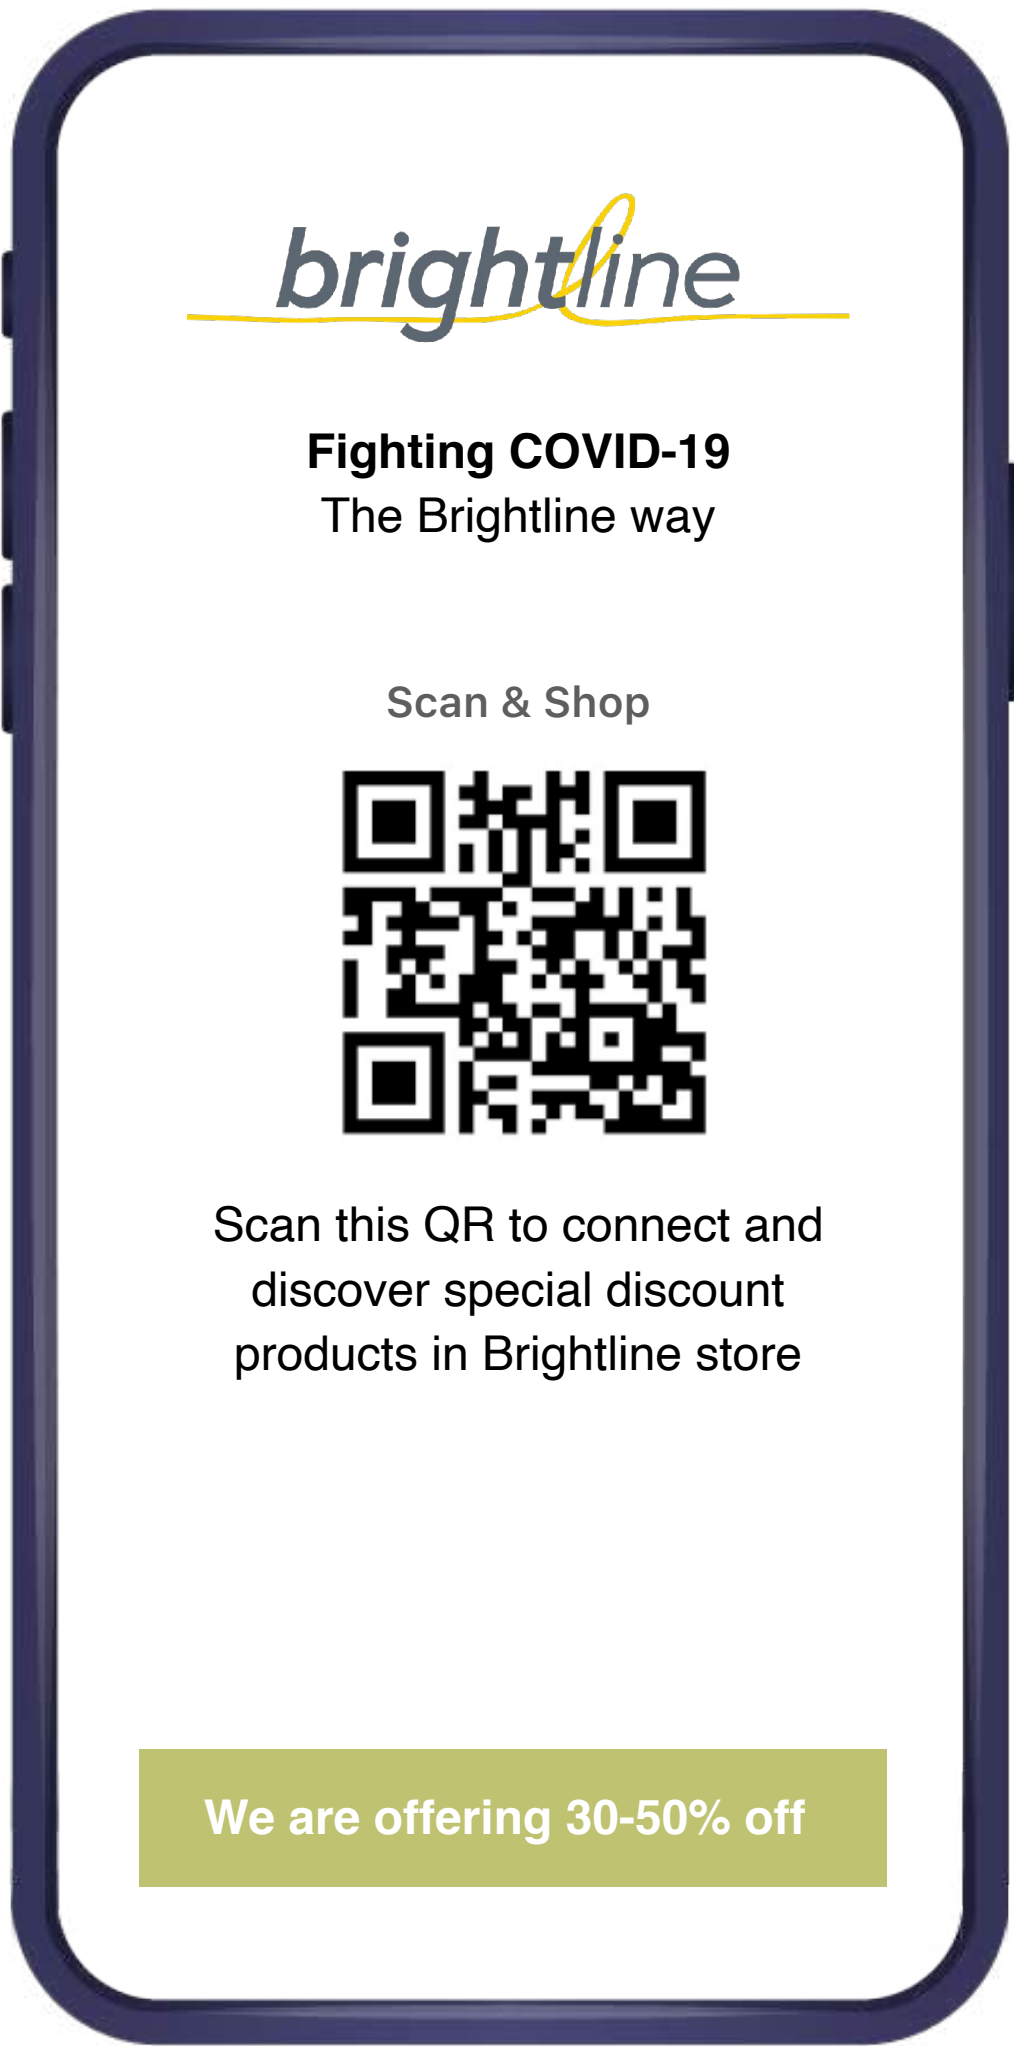

Scan the code from the poster on the lounge
wall and explore products without entering the
real store

Earn reward points on every transaction at
the store linked with the loyalty program

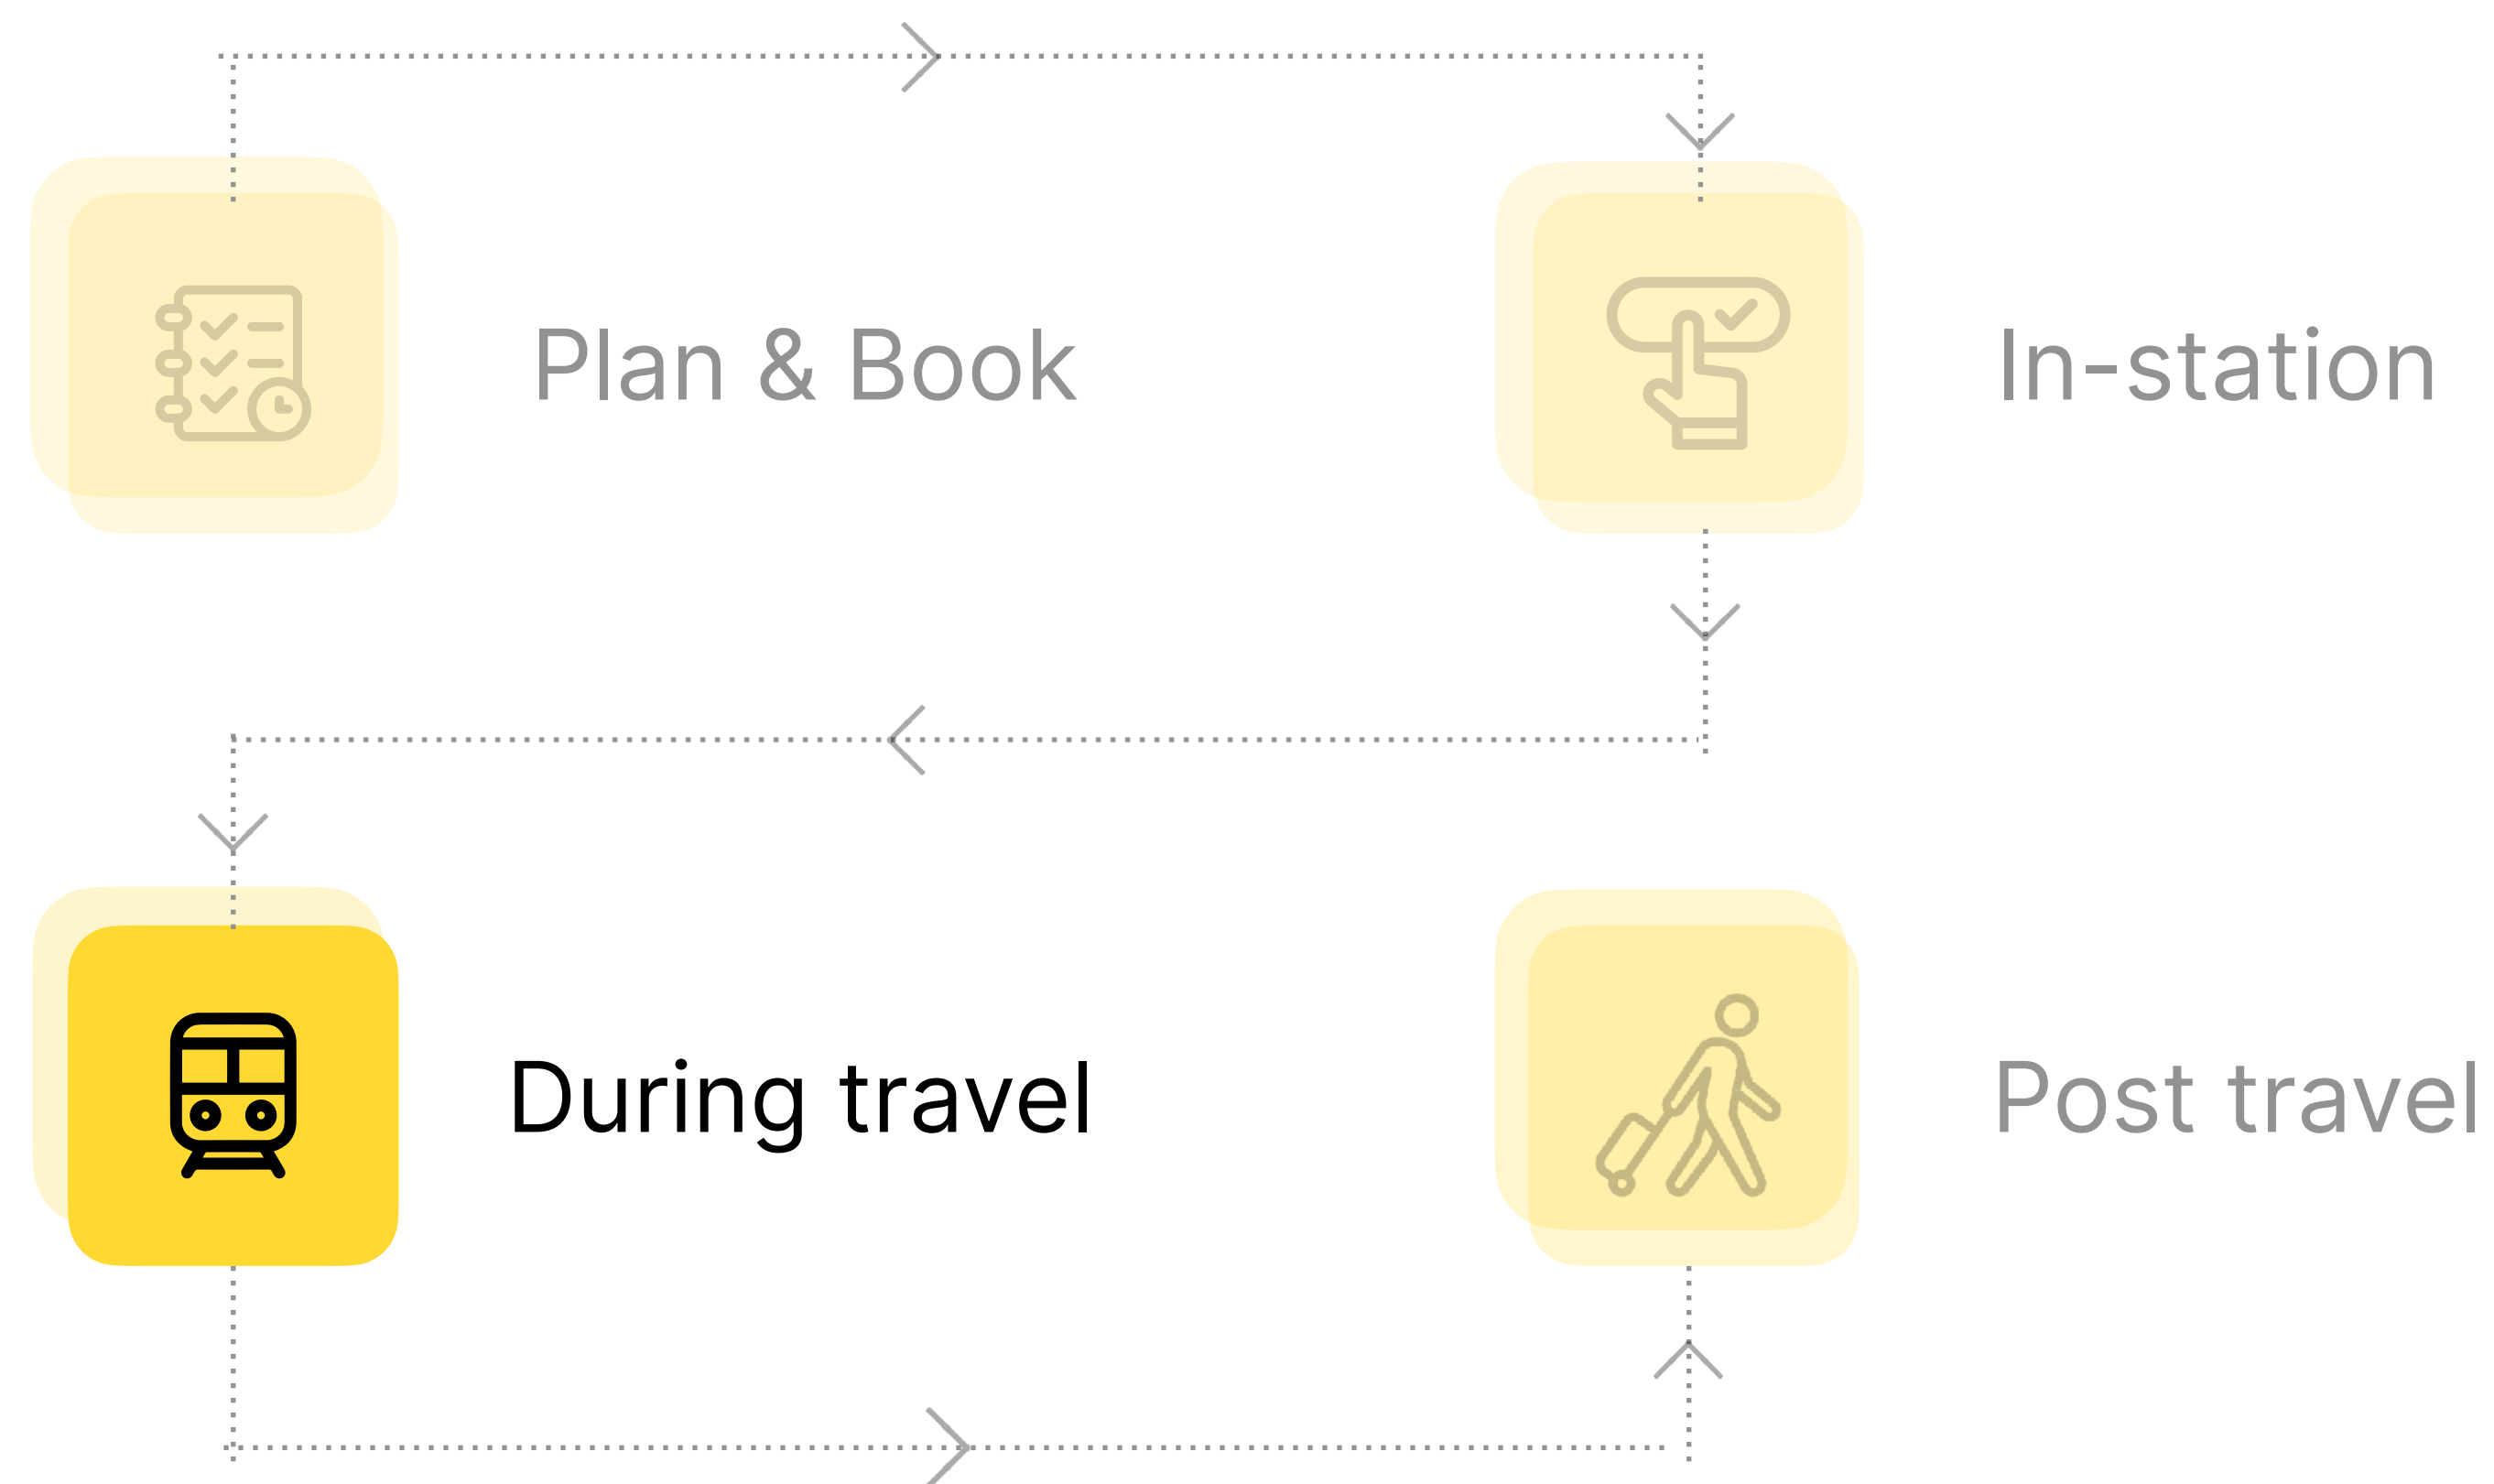

Traveller receives timely & relevant notifications on offers nearby

Way forward

**HOW CAN WE CREATE A COMPLETE
END-TO-END EXPERIENCE BY
INTEGRATING NEW TECHNOLOGIES?**

Through a **discovery** workshop

Why ?

To help our clients understand and approach solutions that **work within the organization**, verify the **ability to execute** and most importantly **appeal to the end user**.

Who?

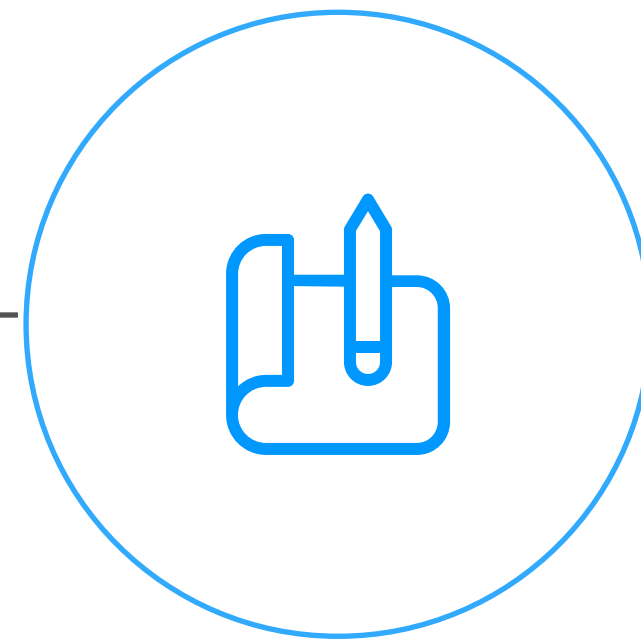

1. We recommend that the participants should **include all major stakeholders** related to the project. Example - Vertical heads & product leads - from business, operations, marketing, engineering and analytics.
2. **Representatives from key user groups**

How?

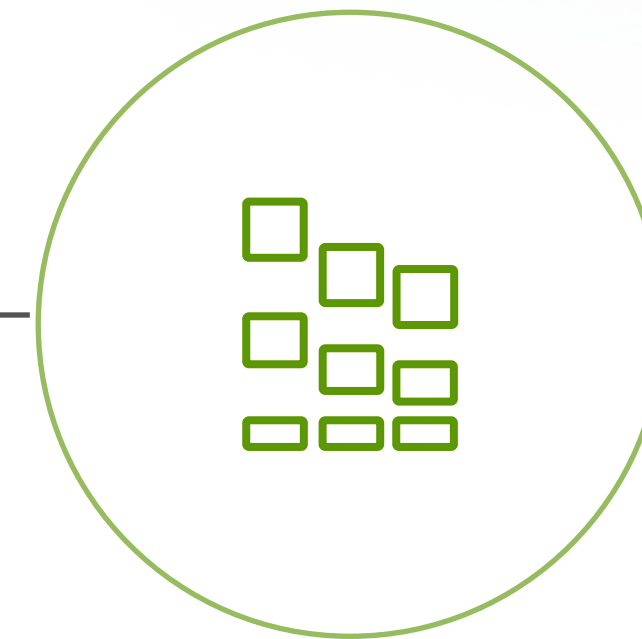

Here is the execution plan for the workshop

Discover

Plan

Compile

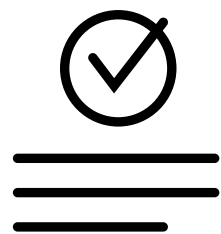

DISCOVER

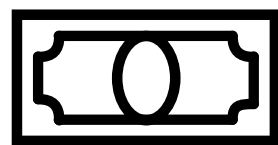

1. Interview travellers and users
2. Understand the business goals and craft the intent for the product
3. Understand the users - User personas, needs, experience journeys and pain points
4. Establish the design pillars
5. Creating broad level features

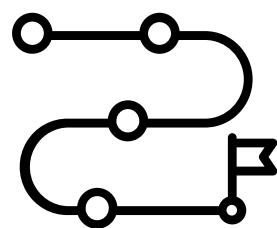

PLAN

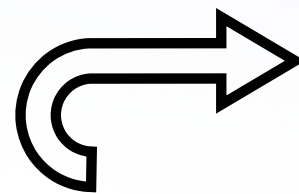

**Feature
consolidation**

**Feature
monetisation**

**Product
Roadmap**

**Conclusions:
Next Steps**

Feedback

COMPILE

Post workshop we compile the findings and share the presentation, and if needed present the same over Webex.

1. Collating workshop findings
2. Drawing insights
3. Final feature set
4. Product roadmap

Thank you
